

CENTRO

CLINICAL DOCUMENTATION

Centro is Crescendo's all-encompassing charting workspace that provides consultants facility-wide with a method to intuitively create and manage their documents on the fly.

FLEXIBLE INPUT. Centro puts the consultant back in control of documenting patient treatment by allowing the individual to use their preferred input method, from microphone dictation, voice or handwriting recognition, charting on anatomical images, form fill, or a combination of these methods. The integration of these advanced technologies enable each consultant to work in their most efficient manner. Furthermore, the Assisted Clinical Documentation feature presents the consultant with a partly constructed medical report based on template and input from previous reports, lab results and ADT data, saving consultants hours per day of repetitive documentation.

PATIENT CENTRIC. By interfacing with the Hospital's Information System or Clinic's Scheduling System, consultants are presented with a configurable "to-do" list or "calendar-view" of patients that have been scheduled for an appointment or are currently admitted to an area of the facility that the consultant is responsible for. The doctor is guaranteed to receive the most updated information instantly, such as room location, bed number and cancelled appointments, thus simplifying the user experience. The to-do list can be easily accessed via tablet, notebook or smartphone, enabling the consultant to benefit from bedside charting and dictation capabilities.

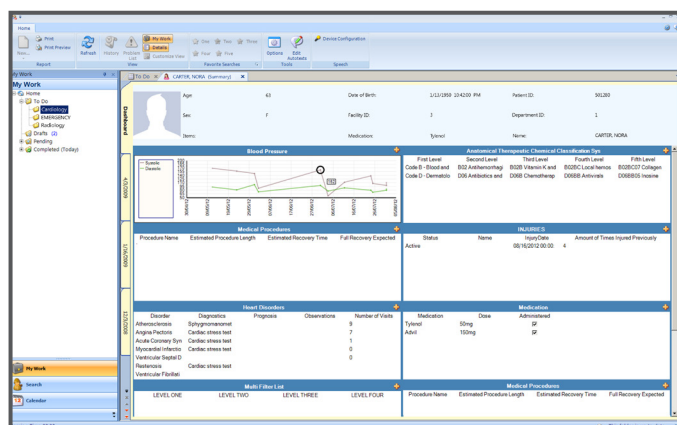

KEY FEATURES

- > Fingertip Access to Patient History
- > Choice of Dictation Input Method
- > Digital and Biometric Signature
- > Support for Nurses Notes
- > Instant Report Creation
- > Mobile Capabilities
- > Configurable Sections
- > PACS/RIS Integration
- > Citrix Support
- > Patient Dashboard

ELECTRONIC FILE. Completed reports are broken down by visit date and reason for visit, meaning that the consultant has fingertip access to a patient's information and previous history, via multiple folder view, when creating a new report. The user can also search for documentation created by other doctors, if authorized. In addition, pertinent information such as allergies, findings or current medications can be carried throughout the document life cycle from Initial Note, to Progress Note, to Surgical Note and finally to Discharge. In essence, the group of Centro documents evolves into the electronic patient file.

ALERTS & NOTIFICATIONS. Patient care is reliant on timely and accurate information. Consultants can make more informed decisions when they have all the data they need. Centro can alert the correct ordering consultant instantly by email, phone or pager when a dictation, report, or test result has been received.

PATIENT DASHBOARD. The Dashboard is a powerful tool which provides healthcare professionals with a snapshot of a specific patient's condition at any given time. The provider is presented with customizable data such as medications, immunizations, vitals, lab results and much more, without the need to create a report.

MRN	Facility ID	Sex	Patient Name	Medicare Number	Admission Number	Date of Birth
890387	2	M	Benoit, Gabriel	BENG 9320 4955	8765331245	08/12/19

729400	2	F	Turner, Chelsea	TURC 9328 9437	8372651934	06/11/19

DECISION SUPPORT. Online medical resources help consultants efficiently find answers to pressing clinical questions, diagnoses, or medications while dictating or reviewing reports. Centro integrates with these search tools to ensure that doctors find the information they need.

FINAL OUTPUT. The sections of the report are assembled in the background into a final report, containing all formatting including logos, headers, and footers. The consultant can essentially view the compiled document and make corrections before electronically authenticating the report. Documents are then automatically distributed to referring and attending consultants and the dictation cycle can begin over again. Charting patient care via dictation, handwriting and keyboard has never been this effortless. Centro is without a doubt the most robust charting workspace available today!
