CYBERSECURITY READINESS

Cyberator - ® Cybersecurity Diagnostic Tool

Conduct your cybersecurity maturity assessment with just a few steps and use the intuitive improvement roadmap to close gaps with Zartech's Cyberator®. Cyberator® measures your current and desired target state of maturity against cybersecurity capabilities. Developed by security experts, the tool uses industry expertise, data-driven analysis and industry best practices to transform your security program management and empower impactful business decisions.

Why Zartech Cybersecurity Diagnostic Tool

Proven Market Leading Methodologies meeting Industry Standards
NIST, ISO2700x, SANS Top 20 Controls, COBIT, HIPAA, PII, and PCI to name a few.

Standardized Reporting with Improvement Roadmap for new or existing Plans
Cybersecurity assessments from Cyberator® provide

- Quantifiable maturity scores

- A comprehensive improvement plan to address the gaps

- Consultation with a security executive to go over the scorecard and action plan

- Links to security tools, policy and templates to help you develop your cybersecurity strategy

- Over 301% ROI

> "*As a cybersecurity practitioner, Zartech's tool offers me a drastic reduction of time in a risk assessment, and it gives me a broader range of governance and cybersecurity frameworks to work with. The comprehensiveness of the tool, the ease of use, and the web-enabled self-guided mode also provides me with the independence to use it with internal or external resources. It is the first automated diagnostic tool I see that leapfrogs the organization into very rapid action, based on the scores and analysis in the reports.*"

- **Paola Saibene**
Former CTO State of Hawaii;
Received Governor's Commendation for Cybersecurity Initiatives

Who Needs It?

- Any industry and any organization size

- Any organization that wants to improve their cybersecurity posture and maturity level

- Any organization that wants to do due diligence on vendors they conduct business with
