*For nearly 40 years, NJ Met Inc. has been a pioneer in the Commercial, Military, Aerospace, Industrial, Automotive and Medical fields, providing worldwide quality electronic component procurement, screening and qualification, with the testing of electronic component products.*

NJ Met Inc. is AS9100 Rev. C/ISO9001:2008 certified, and recently successfully completed the Defense Logistic Agency's (DLA) laboratory suitability assessment. They are now qualified to test Federal Stock Classes 5961 (Semiconductor Devices) and FSC 5962 (Microcircuits) to DLA's QTSL test requirements. They are set apart from their competition by their DLA, AS9100 and ISO9001 certifications, and pride themselves on having achieved these.

NJ Met is also registered with GIDEP, SAE International, ERAI, ASTM, ITAR, IEEE, and ANSI/ESD20.20. Their employees have hands on training in the Counterfeit Components Avoidance workshop, run by the Components Technology Institute Inc. NJ Met have just celebrated 38 years of Laboratory Procurement

and Testing Services, and has an outstanding A+ rating with the Better Business Bureau.

They are at the higher value end of the Middle Market sector, having been able to maintain their DLA, AS9100 and ISO9001 certifications. NJ Met sees the key advantage of being a Middle Market company as being the personal attention that they are able to give to their clients, and they feel that this really sets them apart from other businesses in their sector. The lack of bureaucratic confusion also highly benefits them in this sector, and they find that because of this they are able to provide a more focussed service to their clientele.

NJ Met ensure their clients are receiving the best quality service from them by using a quality system, which is ANAB accredited for

AS9100 and ISO9001. Their philosophy is that the customer is the most important business entity, and they will always aim to utilise every resource available to ensure maximum customer satisfaction.

In the future, NJ Met would like to further explore the medical sector, as they feel that they will be able to make some valuable contributions to this area.
