

Versatility meets requirements

Marian converts technical foams of different densities, thicknesses and compositions to meet the requirements of the customers' applications. The company offers custom die cutting, slitting, laser cutting, water jet cutting and adhesive lamination of foams. Marian's manufacturing techniques hold tight tolerances even in highly intricate part designs, and the company has 10 manufacturing locations globally, representing North America, Asia and Europe. Marian supports global product lifecycles from development to production.

Marian works with customers across many markets, and an exciting product it will be showcasing at the 2017 Foam Expo is foam gaskets for cushioning, sealing and vibration isolation in automotive cameras. With the emerging technology of surround-view systems in automobiles, Marian continues to manufacture innovative foam components that provide the protection required by sensitive camera parts. Additionally, Marian manufactures foam parts with the ability to work seamlessly with manual or automated placement systems. Stop by **Booth 229** to learn more.
