

VitalView

Restoring Visibility to Disparate Chargemaster Data

Visibility to your CDM data continues to become more complex. Today more hospitals are switching to sophisticated Patient Accounting Systems (PASs) that replace traditional data structures with a more global and interconnected CDM approach. This industry shift in the way PASs - handle service line data obscures the 360 data view, impacting critical visibility to accurately code and bill for the services received by the patient. As a result, this strains healthcare administrative resources, putting compliance and revenue at risk.

PROBLEM SOLVED.

Introducing *ViewView™*, a powerful feature available with our *VitalCDM™* product suite. *VitalView* eliminates the challenge of limited viewability through a proprietary multi-source 360 view giving complete transparency and connection to all ancillary systems referenced and utilized by your organization.

Through an advanced link logic and user-friendly interface, *VitalView* is designed to save time and facilitate accurate and comprehensive review and assignment of Cost Centers, ancillary systems and charge routers from a single screen.

GETTING THE VIEW THAT MATTERS.

The screenshot displays the VitalWare software interface. The main window shows a list of medical procedures with columns for Proc Master, Procedure Description, Price, Revenue, Default CP, and Mod1. A 'Managing Cost Centers' dialog box is open, showing two tables: 'Available Cost Centers' and 'Assigned Cost Centers'. The 'Available Cost Centers' table lists three items: 1. 70290 OP LAB & PHLEBOTOMY, 2. 70310 EKG, and 3. 70320 NON-INVASIVE CARDIOLOGY. The 'Assigned Cost Centers' table lists two items: 1. 61230 INTENSIVE CARE NURSERY and 2. 70400 RAD DIAGNOSTIC. The dialog box also includes a 'Comments' section with a timestamp and a note: '2/7/17 - Adding to Rad Cost Center per request from Dr. Smith'. Navigation buttons like 'Save' and 'Cancel' are visible at the bottom of the dialog.

VitalView solves the challenges presented by current CDM data - allowing your teams to easily view and pull key data points efficiently, accurately - and most of all - completely.

Let us help you expand your view, schedule your demo today.

- Review ALL associated procedure, pharmacy and supply items associated with a charge line, creating 360 visibility and organizational transparency
- User-friendly screens giving the flexibility to view and filter by location, service line, volume, revenue, usage - meeting multiple user needs
- View Cost Center charge line relationships and comparative pricing data in a single screen
- Combine files from various ancillary systems - like pharmacy or supply item - in a single view for easier analysis of data

VitalView works to help you take the long view, with tools that validate proper code use and confidence in meeting compliance.

- Identify discrepancies in descriptions, charges and other pertinent information with ease
- View charge routers, charge navigators, and/or explosion codes in correlation with the charge line being used to bill

And because you have complete access to VitalCDM, you get the added benefit of:

- A robust user-defined workflow module that can be incorporated with any CDM and/or subsystem file that can be accessed from any mobile device
- Continual charge analytics and ready access to peer pricing and other regulatory information tailored to the services performed in the clinical departments.
- Comprehensive and up-to-date regulatory, coding and compliance information with access to VitalCoder™
