LIVE DEMONSTRATION.

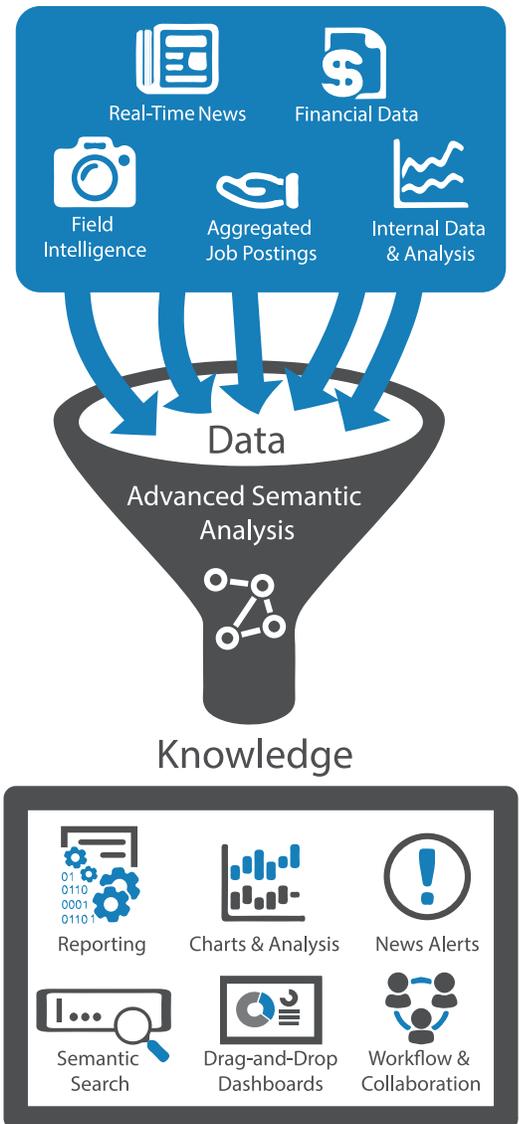

The challenge for many companies is finding time to **collect, organize and analyze** all of the information necessary to understand what the competition is doing right now and what they are likely to do next.

Knowledge360[®] gives you **insight into your competition** with comprehensive competitor information, cutting-edge analytics, and robust knowledge management tools, all while saving you time and money.

3-IN-1 SOLUTION

Knowledge360[®] offers **Competitive Intelligence, Knowledge Management, and Workflow & Collaboration** tools all rolled into one easy-to-use SaaS solution.

HOW IT WORKS

What Makes Us Different?

Traditional CI software relies on meticulously built taxonomies that must be maintained. Knowledge360[®] leverages the power of Natural Language Processing (NLP) and advanced machine learning technologies to **semantically analyze your data**, save users time, and identify trends faster.

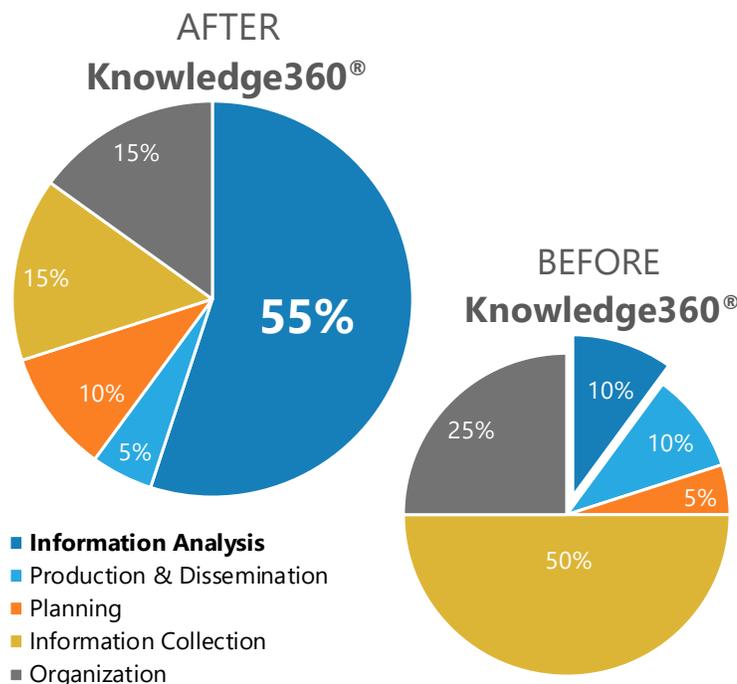

Save time organizing information. Custom dashboards and a widgetized framework enable each user to consume data in a format that makes the most sense to them.

Save time collecting information. Subscribe to company profiles to receive real-time updates on company-specific news, financial information, hiring trends, patent applications, and more.

Save time building and formatting reports. Build on-demand reports only once using the Knowledge360[®] report builder and quickly share dynamic weekly, monthly, or quarterly reports.

Save time developing analysis. Import existing analysis from Excel or use the Knowledge360[®] tag cloud to help develop charts and analysis highlighting key trends in your data.

Save time sharing news and insights. Share reports, news, and analysis with key stakeholders, your team, an entire department, or across a global enterprise.

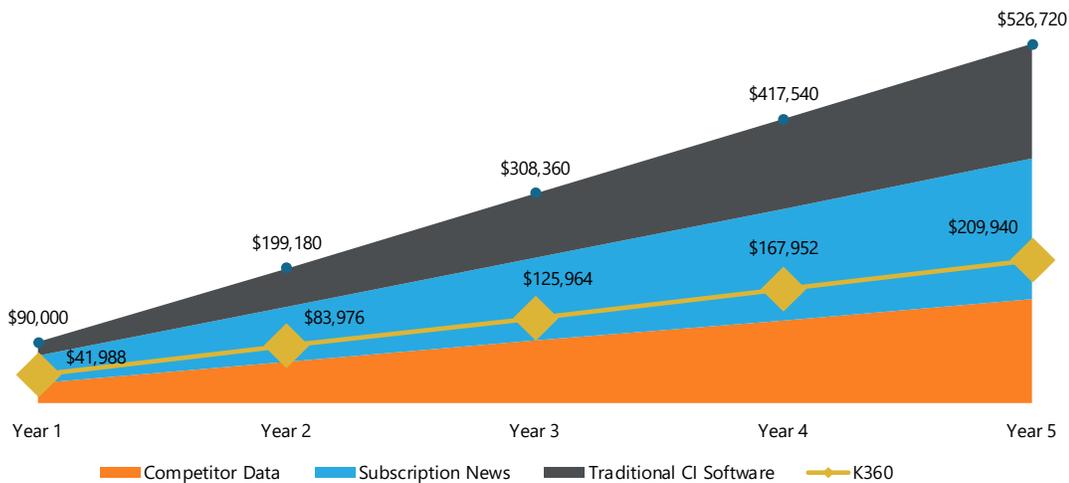

Automate routine tasks, such as information collection and organization, and **spend up to 45% more time on analysis.**

The Business Case: Who Benefits?

Today's organizations are focused on an **integrated intelligence strategy that leverages individuals from every department** (Research & Development, Sales & Marketing, Human Resources, Operations, Information Technology, and the C-Suite) to feed information into a central source and disseminate key findings broadly.

With Knowledge360®, R&D teams in the field can easily upload information via email for the C-Suite to view from anywhere in the world while HR can keep tabs on local hiring trends and the Sales & Marketing team can keep their eye on competitors all from **one centralized, customizable tool!**

Over a 5-year period, Knowledge360® users can **save more than \$315,000** over non-users.

Awarded the Gold Seal of Excellence by Strategic and Competitive Intelligence Professionals (SCIP).

Knowledge360® was awarded the first ever "SCIP Certified" endorsement of a **competitive intelligence software solution**. SCIP's global community of 3,000+ business experts across industry, academia, and government come together to build and share strategic intelligence, research decision-support tools, processes and analytics capabilities. This endorsement distinguishes CIPHER as an organization with **exceptional experience, skills and knowledge**. It conveys that CIPHER's Knowledge360® solution meets or exceeds the rigorous standards set forth by SCIP and its membership.
