# InspectER™ for Inspectors, Fire Marshals and Operations

Mobile app provides better incident safety and inspection management – plus inspector work load management – for maximum efficiency

Having critical data at your fingertips in the field has long been a need in the fire service. Now, an app usable on any mobile tablet device, regardless of connectivity, ensures fire inspectors only do the inspection once and fire marshals and operations personnel can share data rather than using two different products that don't sync.

This means increased incident efficiency, productivity and safety for fire department personnel and their constituents. It also leads to increased efficiency for managing personnel workloads, which can be very time-consuming.

Features of the product include the ability to:
- Access occupancy and building information in the field, 24/7, whether online or not
- Synchronize your data quickly **(minutes vs. days)**
- Capture photos for each inspection observation
- Read or edit occupancy and building information while conducting or reviewing inspections
- Conduct custom inspection activities on your mobile tablet just like you can when online
- Double inspection efficiency for minimal cost
