

For Immediate Release

Radiant Hosts Free, Half-Day Seminars on Light & Color Measurement

REDMOND, Wash. – May 18, 2017 — Radiant Vision Systems, a leading provider of visual test and inspection systems for lighting and display devices, announces that it will host a series of live, half-day seminars presenting technical concepts and solutions for “[Light & Color Measurement](#).” Seminars are led by Radiant’s team of light and color measurement experts, and include live demonstrations of display testing, backlit symbol evaluation, and LED intensity measurement using Radiant [TrueTest™ Automated Visual Inspection Software](#). Seminars will be held throughout the United States at various dates and locations, with the next seminar to take place June 1 in Burlington, Massachusetts, USA.

Lighting and displays have become integral to the functionality of the latest technology in electronics, automotive, aerospace, medical devices, and other industries. Manufacturers are adopting modern LED and display technologies to improve the performance and safety of their products, and are tasked with understanding how illuminated components impact the overall design, quality, and end user experience of these products to ensure positive ROI. With a foundational introduction to topics in light and color measurement, Radiant’s live seminar series presents photometric imaging solutions that are able to accurately simulate human visual perception of light to ensure the truest evaluation of product design and function. These solutions also answer the need for quality control on the production line, where they are used in fully-automated integrations to optimize the efficiency of operations throughout manufacturing.

Attendees to Radiant’s seminars will learn:

- The fundamentals of light and color
- How the human eye responds to light
- How to capture and quantify meaningful qualities of light and color using image-based photometric measurement systems
- The components of a successful light measurement system
- Applications and considerations for image-based evaluation of displays, backlit symbols, and light sources

Demonstrations of each application will be provided throughout each seminar using Radiant [ProMetric® Imaging Colorimeters and Photometers](#) and [TrueTest Software](#). Attendees will have the opportunity to discuss applications with Radiant’s technical team following each presentation. All seminars will be hosted between

22908 NE Alder Crest Drive, Ste. 100
Redmond, WA 98053 USA
Tel: +1.425.844.0152
www.RadiantVisionSystems.com

10AM-1:30PM in their respective city. Each seminar is free of charge, and lunch and refreshments are provided courtesy of Radiant.

About Radiant Vision Systems

Radiant Vision Systems works with world-class brands and manufacturers to deliver creative visual inspection solutions that improve quality, reduce costs, and increase customer satisfaction. Radiant’s legacy of technology innovation in photometric imaging and worldwide install base date back more than 25 years and address applications from consumer electronics to automotive manufacturing. Radiant Vision Systems product lines include TrueTest™ automated visual inspection software for display systems, and ProMetric® imaging colorimeters, photometers, and light source measurement systems. Radiant is headquartered in Redmond, Washington, USA, with strategic offices in China and South Korea. Radiant has been a part of Konica Minolta’s Sensing Business Unit since August 2015.
