

PBX HOSTING

Listen. Talk. Communicate.

Get the competitive edge without the expense of buying, installing, and maintaining a PBX.

Pulsar360's robust offerings include an Enterprise system with advanced features and functionality including full Call Center capabilities. The hybrid architecture provides for a Premise IP PBX combined with Hosted stations for remote offices/worker. Cloud PBX "Lite" is the perfect replacement for SOHO and SMB key systems or business / Centrex lines. Virtual receptionist, voice mail to email, fax to email and call-answering mobility are just a few of the features.

Redundancy and Reliability

- Multiple redundant servers in geographically dispersed data centers provide redundancy for all Cloud IP PBX instances
- 99.9999% up-time reliability

Pulsar360 Hosted PBX Key Benefits

- Lower CAPEX and OPEX because there is no need to own, purchase, install or maintain your own PBX core. Enjoy predictable monthly communications expenses and easily scale up or down based on your business needs.
- Easily add stations or provide services to geographically-dispersed locations and/or telecommuters. Phone system change order charges are eliminated.
- All users and locations are members of the same "virtual" IP-PBX and regardless of size or the number of calls received, a busy tone is never returned to prospects or customers.
- Disaster recovery options ensure you are always up and running.

End Point Diversity

- We currently support 30+ SIP manufacturers and over 200 IP telephones with our End-Point Manager. No need to purchase new IP phones.
- Soft Phone Flexibility improves productivity for mobile employees, as all features can be extended through the use of laptop-resident soft phones.
- We support BLF/DSS Side Cars.

Web-Based Management and Reporting

- Web-based service management interfaces make certain tasks (e.g. moves, adds and changes, voice mail greeting changes, call forwarding treatments and destinations) easier for support staff and end-users.
