

SURGEON GENERAL'S WARNING:
Radon causes lung cancer.

Your Area Is Being Tested

FREE RADON TESTING

FREE Kits & Results!

free mailing included

Radon is an odorless gas that comes from the decay products of uranium in the ground beneath buildings. It seeps into your home through cracks, sumps, joints, basement drains or other tiny openings in foundations.

The Citizens for Radioactive Radon Reduction, a non-profit organization dedicated to reducing lung cancer due to radon, wants to help you estimate your radon exposure and the risk it poses to your health.

Radon is the second leading cause of lung cancer after smoking. It can significantly increase the risk for never smokers and for smokers as well. There are over 21,000 deaths / yr from radon-related lung cancer.

Donations and volunteer expert services have made it possible for us to offer Free advanced radon measurements* to individuals, their family or friends who want to know what their radon exposure is at home and what can be done about it.

Because some people find current radon measurement technologies challenging to use and difficult to interpret, we are studying the effectiveness of a new, easier radon measuring method compared to those older conventional methods. We also hope that your participation may spark some interest and awareness of radon exposure and lung cancer risk in your community. All testing is filed with the Environmental Protection Agency (EPA).

If you are interested, please send an email or call stating your wish to participate:

(CRRR) Radon Testing Study

EMAIL: info@Citizens4RadonReduction.org or National Office **PHONE** (618) 830-4660 / (412) 961-1980 for questions.

We will send you a follow-up email with enrollment instructions for you to complete and return. You can enroll online at:
<http://roimarketmedia.com/CRRR/index.htm> (scroll to the bottom)

*State laws or regulations requiring special approval of detectors, licenses and/or fees even for free distribution of radon detectors to home owners do not allow us to enroll participants from New Jersey, Florida and Maine. Sorry that, at this time, our budget will not allow participants in Alaska or Hawaii.

Study is conducted by: Daniel Steck, PhD Physics, Professor Emeritus at St John's University, active in radon research & outreach more than 30 years.

Citizens for Radioactive Radon Reduction is a national 501-C3 non-profit organization. A member of the American Association of Radon Scientists & Technologists (AARST.org).

Members are typically individuals interested in awareness, education, and action to prevent radioactive radon exposure. Members can contribute suggestions and ideas, but board meetings and voting are restricted to officers. If you wish to become a member, simply go to <http://www.citizensforradioactiveradonreduction.org/contact-info/> and give us permission to put your name in as a member. Thanks for your participation in helping us to save lives and make a difference through radon reduction advocacy.
