Transign Announces North American Release of the LED Destinator EnCompass™, a GPS-based, Hands-free Message System to Improve Route Communication and Passenger Safety

(Waterford, MI) – **Transign™** is pleased to announce the North American release of the **LED Destinator EnCompass™**, a hands-free destination sign system that combines GPS-based message progression with Transign’s existing high-quality **LED Destinator™** platform to improve transit safety and reliability.

The **LED Destinator EnCompass™** system enables messages displayed on all interior and exterior signage (destination, next stop, route number, and interior passenger information) to continually update based on a bus’ ever-changing location, eliminating driver distractions and helping them maintain focus on roads, stops, and on-board passengers. The system also proves extremely beneficial to dispatch operations, providing more accurate location information as well as more efficient control over route information and changes.

“Safety and efficiency are among our highest priorities,” said Jamie Lipka, Transign’s President, “and we are excited to bring large HD fleet capabilities to smaller, more rural areas. With our value added customizable packages, we hope our unique system will allow all agencies to experience the safety and reliability of AVL software regardless of their size or budget.”

The **LED Destinator EnCompass™** sign system gives transit agencies an affordable solution to improve their service and communication, increase ridership, and run more efficiently to maximize revenue.

About Transign

Transign has been a leading provider of LED destination signs, run number boxes, roller curtain signs and passenger information systems since 1959. Transign currently serves hundreds of agencies and private shuttles alike in both the United States and Canada, and prides itself on being one of the most highly recommended and endorsed transit signage providers in the industry today.
