

HARVESTER SERVER

Defensible Automated E-Discovery
Collection

**Harvester 5.0
has Arrived!!**

SEARCH AND COLLECT DISCOVERABLE DOCUMENTS AND EMAIL

Incomplete and undocumented electronic discovery collections occur every day. The result of mishandling these files can be costly to both the client and their legal counsel. Unlike other offerings, Pinpoint Labs doesn't require you to purchase additional products or services in order to facilitate a collection. Data collected with Harvester can be accessed with other popular E-Discovery tools. A simple flat rate pricing structure allows you to use the tools as often as you need without worrying about hidden fees.

Harvester Server allows users to filter and defensibly collect E-Discovery files from a laptop, desktop or network locations. Harvester Server can be used to monitor jobs from a central location and launch pre-configured collection job profiles on remote computers. In addition to collecting data, Harvester Server is also a very powerful culling tool that many use post collection to filter Microsoft Outlook PST's, and loose files by keyword, date range, and other criteria. Being able to get real-time feedback as collection jobs start and monitor overall progress is very useful. Progress results can be emailed directly from Harvester Server as a Microsoft Excel spreadsheet, PDF, RTF, and many other formats.

Enterprise Wide Collections

Harvester Server administrators can pre-configure collection job profiles which can be ran in "stealth" mode on remote computers. Harvester collection job profiles can also be launched by a link in an email or legal hold notice sent to each custodian. The scripted jobs can identify files and emails by keyword, date range, and also perform deduplication and deNISTing. Matching items will automatically be copied to the specified network target location. Data collected with Harvester Server can be processed with all popular E-Discovery tools or shipped to the vendor of your choice.

THE HARVESTER 5.0 SERVER UPGRADE PROVIDES:

With the release of **Harvester 5.0 Server**, users have a greatly expanded email processing tool at their disposal. Here are a few of the new features: 64-bit Microsoft Outlook support; processing of OSTs and PSTs without Outlook installed; direct connection to Microsoft Exchange; Office 365; IMAP sources including Gmail, Yahoo and others; multi-threaded email processing; and new ESI 'Easy' Vault interface with 64-bit support.

With a growing number of corporations and government agencies moving to Google Docs, Gmail or Office 365 Outlook mail, it is important to be able to add these as sources during E-Discovery collections. **Harvester 5.0 Portable** makes it easy to add these and other web-based email accounts. The targeted email results will be saved to a PST file, allowing easy access to the offline messages.

COMMON HARVESTER SERVER USES:

- ▶ Remotely collect E-Discovery data from custodian computers across the network
- ▶ Monitor job progress and generate reports from a central location
- ▶ Run customized job profiles that keyword search, deduplicate, deNIST, and perform many other targeted collection options

HARVESTER FEATURES

- ▶ Early Data Assessment (EDA) Reports
- ▶ Process OST's, and PST's without using Microsoft Outlook
- ▶ Search and collect email from Microsoft Exchange, Office 365, Gmail, Yahoo, Live and other webmail accounts and save to PST
- ▶ Harvester ESI "easy" Vault (Custodial Drag and Drop window)
- ▶ DeNIST and Dedupe
- ▶ Multi-threaded
- ▶ Set expired licenses for Harvester Portable using Portable License Manager (PLM)

Harvester 5.0 Highlights

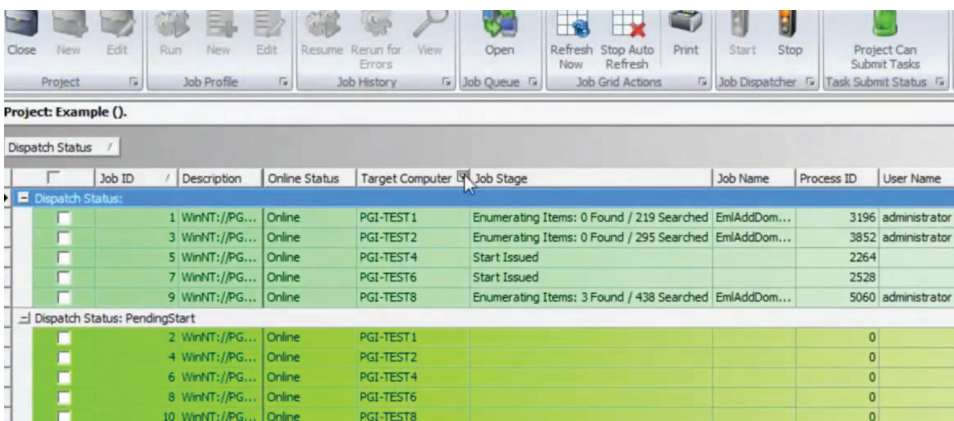

Import a custom computer list or have Harvester take a quick inventory of all the computers on the domain Directory Search by using **Active Directory Search**. Then you can quickly ping the computers to make sure the computer is online, assign the job to a specific job profile (great for legal holds), and apply a specific job ticket to be remotely launched on that custodians computer.

ADDITIONAL HARVESTER 5.0 SERVER FEATURES:

- ▶ Upgraded user interface provides administrator easy access to profiles, job monitor, and scheduling
- ▶ Automated job resume for remote client systems
- ▶ Job dispatcher manages collections across multiple projects
- ▶ Easily open, run or edit job profiles

Efficiently organize and monitor all of your projects and jobs that are being processed across the network.
