# octoScope Company Summary

## Company

### Wireless test solutions and services for Wi-Fi, LTE, IoT and other wireless markets

- Founded in 2006 as a wireless technology consulting company
- Transitioned to product revenue in 2013
- Now offering test solutions for Wi-Fi, 4G, 5G, IoT (Bluetooth, Nest), wireless broadband, connected car, medical devices, robotics, public safety, military

## Product

### Compact, modular, completely isolated and controllable wireless testbed

- Automated, repeatable and accurate metrics of wireless performance & behavior
- Patented novel technology for emulating real-life RF environment
- Wireless performance, coexistence, behavior testing in controlled RF environment

## Team

### Wireless test, channel emulation, wireless protocols and RF

- Track record of delivering successful communications and wireless test products
- Key team members worked together going back to mid-1980s at prominent test equipment companies including Teradyne, HP/Agilent, Tektronix and Spirent

# octoBox Testbed Summary

Multipath emulation

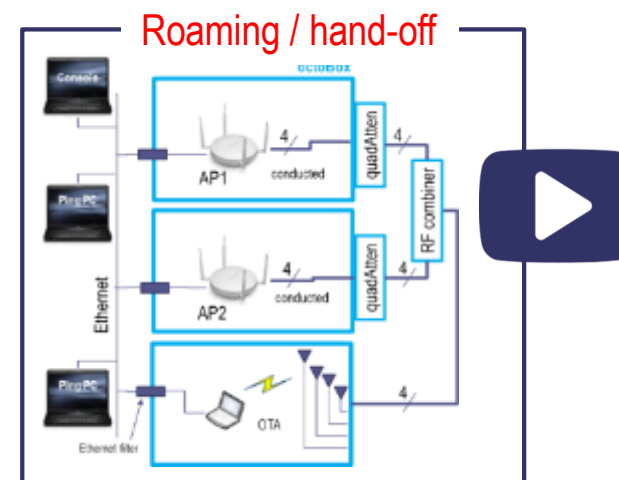

Interference generation

Traffic partner, station emulation

Video and multi-room emulation

## octoBox Benefits

- Reduce wireless test time from weeks to hours
  - Complete isolation and repeatable RF environment minimizes time-consuming open-air testing
  - Automation accelerates data collection, improves test coverage and product quality
- Demonstrate highest achievable performance
  - Ideal MIMO environment for highest possible throughput
  - Supports latest technologies, such as 160 MHz 802.11ac, 802.11ax, MU-MIMO and Beamforming
- Qualify User Experience
  - Emulate real-world challenges
  - Programmable range of condition from best MIMO environment to challenging real-life impairments

## Operators

## Labs

## Chipset vendors

## Equipment vendors

# Wireless Test Applications

- Performance testing
  - MIMO OTA throughput
  - MU-MIMO gains
  - Load testing
  - Roaming
  - RX sensitivity
- User experience
  - Adaptation to impairments, such as path loss, interference, multipath, load
  - Roaming behavior – find sticky clients
  - DFS (dynamic frequency selection)

# Summary of Pal Features and Capabilities

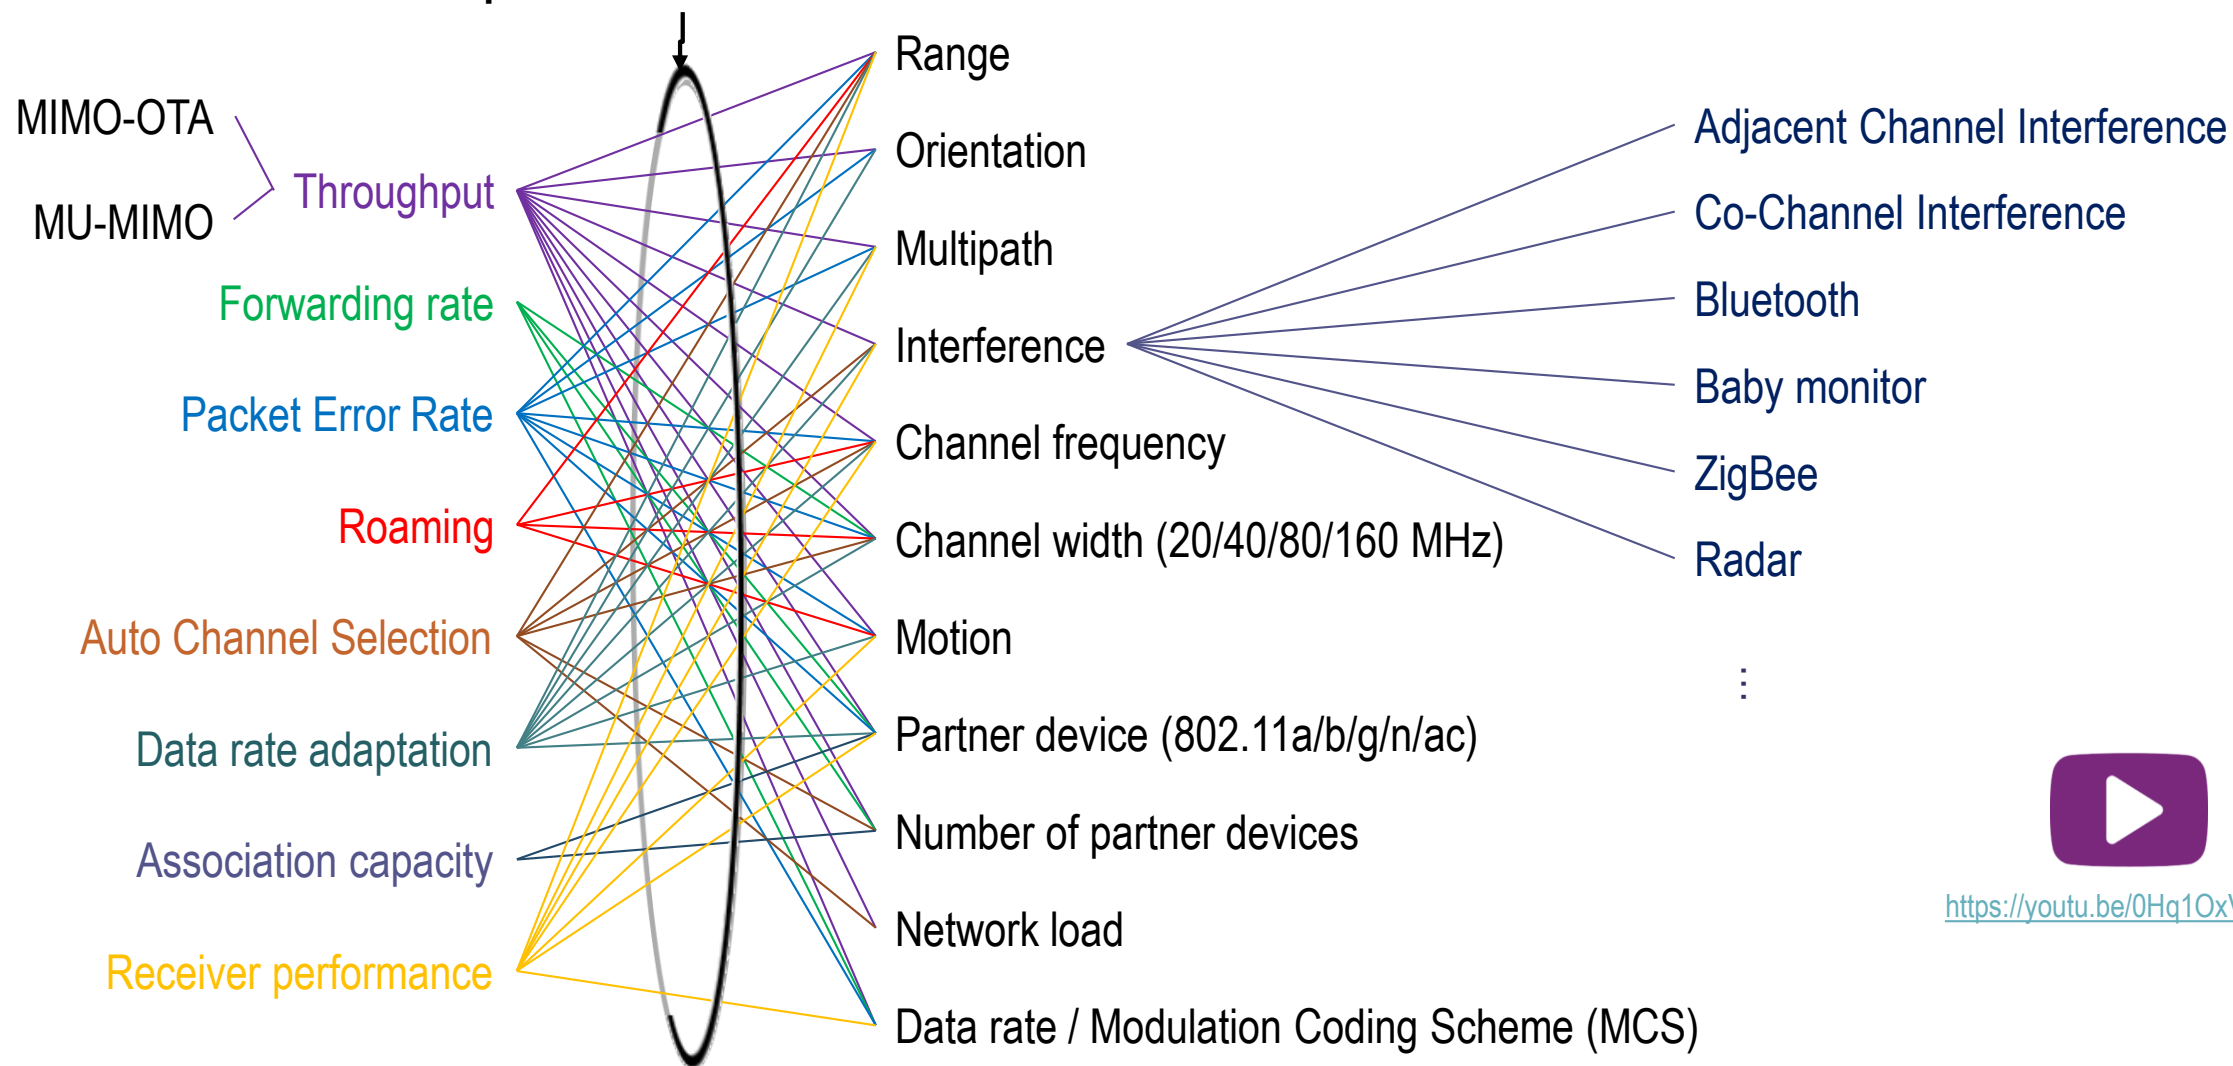

Linux Yocto OS

|                      | 2.4/5 GHz 3x3 radio<br><i>QCA9880 3x3 80 MHz</i> | 2.4 GHz 4x4 radio (wave 2)<br><i>QCA9984 4x4 160 MHz</i> | 5 GHz 4x4 radio (wave 2)<br><i>QCA9984 4x4 160 MHz</i> |
|----------------------|--|--|--|
| MIMO-OTA             | ✓  | ✓  | ✓  |
| MU-MIMO, beamforming |  |  | ✓  |
| Channel width        | 20/40/80 MHz                                     | 20/40 MHz  | 20/40/80/80+80/160 MHz                                 |
| AP                   | ✓  | ✓  | ✓  |

# Tests Supported by the octoBox Testbed

Exponential number of tests vs. variables

MIMO = multiple input multiple output  
MU-MIMO = multi-user MIMO

<https://youtu.be/0Hq1OxVaAwk>

# Throughput Script Browser Based User Interface

Configuration

Test Result

Mbps

# Roaming, Coexistence, Mesh, Large Scale Network Testing, ...

Flexible network topology configurations are possible with octoScope's completely isolated MIMO splitters.

# Unique Patented Multipath Emulator (MPE) Technology

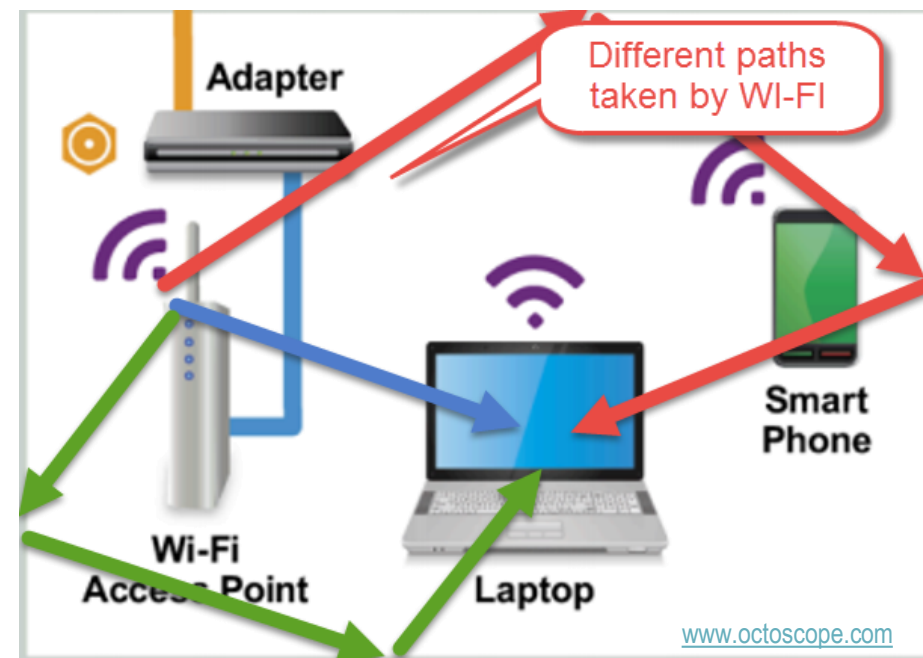

- Broadband (DC – 6 GHz) multipath emulator
- Accurately emulates a home channel model (IEEE 802.11 model B)
- Built-in bypass switch for LOS conditions
- Built-in programmable attenuators for range testing
- 4x4 MIMO link

LOS = line of sight
