

Introducing **GetBAC**

RecoveryTrek's Alcohol Relapse Prevention Program

Accurate. Affordable. Adaptable.

"Case managers and substance abuse professionals should give serious consideration to adding mobile breathalyzer (BAC) testing to their monitoring programs. BAC testing itself can be an effective deterrent for alcoholic relapse but more importantly, when a breathalyzer is paired with a mobile application like MobileTrek the case manager has an immediate red flag notification and can take appropriate steps to conduct additional clinical testing and interviews as part of their relapse prevention protocol."

~ **Donna Smith, PhD, RecoveryTrek Quality Assurance Officer**
