Streamlining Assessments with EagleView Property Information Card (EPIC)™

EagleView's digital property card helps assessors conduct faster, more accurate valuations.

Bothell, WA (September 22, 2017) – Eagle View Technologies (“EagleView®”), a leading provider of aerial imagery and property data analytics, today announces EagleView Property Information Card (EPIC)™, a subscription-based digital database for local government appraisers and assessors.

At the forefront of high-resolution aerial imagery and machine learning, EPIC™ is revolutionizing property assessment by helping assessors keep property record cards up to date without performing manual tasks or property inspections. By automating the assessment process, workflows become faster and more efficient with less room for human error and more accurate valuation.

Assessment and appraisal officials employ a range of traditional and technological solutions to cost effectively maintain property records for a fair and equitable tax roll. Strict time constraints, pressing deadlines and manual entry can lead to mistakes and inconsistencies in property card data. These errors cause missed revenue, more appeals and poor public perception.

“We are pleased to introduce EPIC™ to automate property record changes. EPIC allows appraisers to focus on more challenging and higher value property appraisal work through their existing workflows,” said Rishi Daga, President of EagleView. “For many years, EagleView has been trusted by the government assessment community to provide high-resolution imagery for desktop review during the valuation cycle and appeals process. EagleView’s accurate data and aerial imagery enable assessment and appraisal professionals to meet their deadlines and work more efficiently.”

EagleView plans to demo EPIC™ at the International Association of Assessing Officers (IAAO) conference in Las Vegas from September 24 to 27, 2017, at booth 219.
