Tired of Phish? Start Hunting`

Find & Prevent Business Email Compromise with Phish Hunter

Microsoft

Phishing is for real. $5.3 Billion was stolen due to Business Email Compromise between 10/13-12/16. By comparison, $1 Billion was lost due to ransomware in 2016, per the Internet Crime Complaint Center.

It's not a matter of if….

Is the identity of your colleagues already compromised? Are attackers lurking in your email accounts? **Most organizations only become aware of a breach when end-users or customers notice.**

Actual losses from affected organizations come in big chunks, shown below

- $5.3B Loss in Business Email Compromise
- $900,000 false wire transfer
- $600,000 sent from edu account
- $250,000 mis-sent by B2B customer
- $4,000 per cancelled class wired to hacker's account

The Challenge:

Users may avoid obvious phishing scams, but attackers are organized and patient. **Most email impersonation occurs long after a breach.** During that time, an attacker learns to craft the perfect message to the paying victim.

For IT Pros, Microsoft's identity and email tools offer robust logs and policy controls. Yet sifting through all the information to find a rare breach is time consuming. **A shorter, actionable set of steps is needed.**

Enabling Technologies' Solution

We combine Microsoft's tools and our forensic knowledge to analyze threats, customize rules, and automate responses to targeted attacks. Admins will get a short list of actionable next steps, and users are left with a clean inbox and less risk. The solution is called **Phish Hunter**, and is configured in each tenant to **minimize business email compromise**.

Phish Hunter gives admins a short list of automated actions to remediate

- Forensics , Tenant-Specific Configs and Response Automation
- Prevent through Advanced Threat Protection
- Detect in Advanced Security Managment
- Find hidden issues and auto-respond with Flow Rules
- Remediate in Azure Active Directory

To Go on the Hunt

Please contact securecloud@enablingtechcorp.com for a **forensic assessment** of your Office 365 tenant. If issues or risks are present, we'll provide guidance for setting up Phish Hunter to **remediate or proactively block breaches** in the future.

There's no reason to delay, the big phish just may not have bitten yet.
