

This **comprehensive** and **collaborative** study reveals the estimated costs of homelessness to OC and its 34 municipalities. It highlights the demographic and biographic characteristics of those experiencing homelessness. And, it assesses how costs vary from those living on the streets and in shelters vs. those living in alternative forms of housing.

Average annual cost per person **INCLUDING** most costly 10% of health/medical service users (chronically homeless)

Findings are based on data collected from five main sources: the County of Orange, the municipalities within the county, Orange County hospitals (via the Hospital Association of Southern California and Cal Optima), a sample of non-governmental agencies addressing homelessness and individuals experiencing homelessness themselves. Data was gathered through questionnaires sent to municipalities, hospitals, service agencies, as well as structured in-person survey interviews conducted with a sample of 252 homeless individuals throughout the county. Given the breadth and volume of data assembled, this is one of the most comprehensive studies of the public costs of homelessness in the United States

The collaborative study by Orange County United Way, Jamboree Housing, and the University of California, Irvine, with the support of the Association of California Cities – Orange County (ACC-OC), 2-1-1 of Orange County, and the Hospital Association of Southern California, as part of the County's 10 Year Plan to End Homelessness and its new Office of Care Coordination.
