CreditPoint Software Migrates to Microsoft Azure Cloud Platform

Azure will provide ecosystem to rapidly develop and deploy innovation

TULSA, OK (Nov 29, 2017) [CreditPoint Software](#), a leading SaaS commercial credit risk and collections management software company, announced that it has migrated its infrastructure and application to Microsoft Azure. This move advances the company's ability to take advantage of the Azure platform to drive advanced technologies including Internet of Things (IoT), analytics, and state of the art development tools and services.

CreditPoint strives to continually offer additional value to its growing client-base. "This is a game changer for CreditPoint to rapidly develop and deploy innovation to our SaaS customers. The increase in agility for our development cycles and the concept of "codifying" normally manual processes is huge as we scale and grow our business", said Jonathan Griffin, CreditPoint Software's Director of IT. "This also positions CreditPoint to take advantage of a platform where integration to other systems is easy and scalable".

In today's marketplace, a proactive approach to data security is imperative. The Azure platform will allow CreditPoint to expand its disaster recovery as well as leverage Microsoft's industry-leading security certifications.

"Strategically, Azure's scalability and technology ensures that we can continue to grow and evolve our application to serve our customer's needs," said John C. Powers, CEO of CreditPoint Software. "Our clients have a wide range of business needs. Azure enables us to optimize our solutions for the long-term and in the end, help our clients increase efficiency and achieve better competitive positioning in their own markets."

About CreditPoint Software

CreditPoint Software empowers businesses to be more efficient and eliminate their credit collections management challenges through its SaaS software application and services. The company's web-based product suite offers complete credit and collections functionality including bureau integration, credit and collections rule-based workflows, dispute and customer portals, ratings & financial data, business intelligence, and an online credit application. CreditPoint
