

PRESS RELEASE

FOR IMMEDIATE RELEASE

Atmosera Cited by Gartner as a Representative Vendor in Market Guide for Cloud Service Providers to Healthcare Delivery Organizations

Newly published Gartner Market Guide finds the healthcare cloud market continues to mature, and healthcare provider IT leadership has moved from skepticism to acceptance of the cloud as an IT service delivery model.

PORTLAND, OR – November 30, 2017 – [Atmosera](#), a premier Tier-I Microsoft Cloud Solution Provider (CSP), today announced it was included by Gartner in the new [Market Guide for Cloud Service Providers to Healthcare Delivery Organizations](#). The report provides insights on the Healthcare IT market. The report also provides a listing of cloud service providers who offer products or services to healthcare delivery organizations. “Gartner sees the cloud as becoming increasingly important to healthcare providers because of the pressures they will face to become more compliant and responsive to market changes while reducing or controlling costs.”¹

For over 20 years, Atmosera has delivered managed services and IT solutions to many industries including healthcare. The company counts amongst healthcare customers both providers and vendors such as CarePayment, Consonus Healthcare Services, and Wellsource. Atmosera-compliant clouds can be deployed in Microsoft Azure, Hybrid, and Private Clouds with the following options for Healthcare Providers:

- Atmosera HIPAA/HITECH compliant cloud
 - Atmosera HIPAA light compliant cloud
 - Atmosera HITRUST compliant cloud
 - Atmosera PCI-DSS compliant cloud
 - Atmosera cloud assessment and migration
 - Atmosera DBA as a Service for compliant data
-

In the Gartner *Market Guide for Cloud Service Providers to Healthcare Delivery Organizations*, Atmosera was recognized as a Representative Vendor.

As indicated above, Atmosera is certified with important healthcare compliance frameworks and focuses on delivering affordable, flexible and efficient services as healthcare computing environments become increasingly layered with regulatory and privacy mandates.

“Healthcare providers' growing infrastructure, system and support requirements — compounded by tight budgets and IT staffing issues — will continue to drive them toward a hybrid IT environment in which the cloud will play an increasing role,” stated the report. “Achieving value from cloud services requires healthcare providers to analyze their application inventory to identify cloud-ready workload candidates. This must be part of a cloud computing strategy within their larger IT strategic planning.”²

“As healthcare providers embrace cloud computing, cloud service providers will be selected based on the advantages provided in terms of security, productivity, functionality, and cost,” said Jon Thomsen, Chief Executive Officer, Atmosera. “At Atmosera, we are healthcare IT ready with industry compliant solutions that span the entire computing stack, from connectivity to applications. Our team of experts ensure stringent physical and logical security controls to give customers a level of confidence that we are proud to support.”
