Business Intelligence

Provade

ANALYZE RESULTS. SHARE YOUR FINDINGS. MAKE INFORMED DECISIONS. OPTIMIZE YOUR CONTINGENT LABOR FORCE.

Actionable Information

You are managing a significant contingent workforce and SOW spend. How easy is it for you to pull, polish and present your program data?

Provade VMS automates your contingent workforce and services procurement program and captures detailed information every step of the way. Our Analytics engine helps you turn the information into understanding – at any level of the program.

Provade VMS offers robust and easy to use Business Intelligence (BI) capabilities to enable measurement and continuous improvement in your program. Use the analysis tools to drill down, modify an existing report or create a new report from scratch. From hiring managers to suppliers, each program participant can leverage powerful analytics tools to track activity and assess performance across a variety of dimensions – from a single internal system of truth.

Reporting Flexibility at Your Fingertips

Provade VMS provides operational and performance reporting to support users in their activities and keep them up to date on overall results. Requestors, suppliers, program managers and other stakeholders will appreciate the fast and easy access to information to manage their activities and conduct effective business reviews. Our interactive dashboards are a starting point for research, analysis and decision-making, and our mobile solutions keep the most relevant data right at your fingertips.

Whether you're a data expert or basic user, Provade VMS makes it easy to analyze your workforce spend. Use this powerful tool to define benchmarks, check in on transaction status, identify potential risks and bottlenecks or refine your services procurement strategy. Our BI engine allows you to customize multiple dashboards for real-time relevant updates, format the data and save the fully formatted reports for easy access.
