PRESS RELEASE
FOR IMMEDIATE RELEASE

Atmosera Named a Finalist in *Computing Magazine's* 2018 DevOps Excellence Awards for Release Management as a Service

Atmosera Recognized for DevOps Leadership in Automating the Deployment of Websites and Applications in Microsoft Azure

PORTLAND, OR – February 27, 2018 – [Atmosera](#), a premier Tier-I Microsoft Cloud Solution Provider (CSP) today announced that the company's [Release Management as a Service](#) (RMaaS) has been recognized in *Computing Magazine's* [Excellence in DevOps Excellence Awards for 2018](#). The awards showcase outstanding achievements by organizations, personalities and solutions operating within the DevOps space. Atmosera's solution earned finalist status in the Best DevOps Cloud Product category.

Atmosera Release Management as a Service automates the deployment of websites and applications in Azure Platform as a Service or PaaS environments, supporting an Azure-based low-touch solution that incorporates change management for applications, SQL schema, and content. Customers leveraging Atmosera RMaaS benefit from a predictable and consistent experience with automated quality control that is especially useful when new website versions or features are released frequently.

Atmosera RMaaS was developed to address the gap that exists for companies and developers wanting to move quickly through release management while ensuring quality control through reliable, repeatable testing procedures. The platform was purpose-built for Azure using productized integration code to seamlessly connect industry-leading products.

"It is truly an honor to be recognized by Computing Magazine as a finalist in the DevOps Excellence Awards," said Scott Harvey, Vice President of Engineering and Operations,

Atmosera. "Our customers wanted to improve the quality of their release processes to eliminate the possibility of new code breaking their websites and applications. We successfully addressed this need in Azure. Achieving finalist status with this award further validates the solution for customers who want to improve time-to-revenue with a reliable, predictable, and repeatable delivery platform."

Winners of the DevOps Excellence Awards will be announced at an awards ceremony on March 21, 2018 following Computing Magazine's annual DevOps Summit in London.
