EagleView Mobile App Transforms How Roofers Measure, Bid and Plan Jobs

New App from EagleView Provides Streamlined Access To Reports On The Go, Finally Freeing Contractors From Their Desktops

Bothell, Wash. (March 1, 2018) - [EagleView Technologies](#) ("EagleView®"), the leading provider of property intelligence for the construction, government, and insurance industries, today announced an exciting new mobile app for roofing contractors. The new app enables contractors to see key measurements quickly, introduces a new dashboard for report access and status updates, and provides the ability to upload user-generated images.

Users can download the EagleView app ([click to download](#)) from the iOS App Store today.

The app utilizes EagleView's unmatched library of more than 350 million aerial images to provide contractors with accurate measurements at-a-glance, and instant access to their data and reports anytime, anywhere. It is the latest innovation from EagleView, the roofing industry's leading provider of detailed, fast, and accurate measurements for roofing, siding, and solar projects.

EagleView's own high-resolution images of the property are used to produce a detailed report which is rapidly delivered to the app. Contractors preparing bids can now upload user-generated images from their phone to track their jobs and include in the EagleView report. With all this critical information at their fingertips on the measurements at-a-glance screen, contractors have everything they need to prepare a bid before even visiting the property. The EagleView app also allows contractors to share files on any device and access them at any time in one place.

No other company can deliver the same level of accuracy, speed and scale as EagleView, giving this app the potential to transform the way roofing contractors work every day, across the country.

"We are constantly exploring how to use our technology to improve the way contractors do business, and are extremely excited to share this new app," said Rishi Daga, CEO of EagleView. "From the clean, easy-to-use interface to the ability to quickly access reports on the go, the EagleView app is going to dramatically improve workflows and make the bidding process a faster, smoother experience for all involved."

A release on Android platforms is planned for later this spring.
