Ox Blue®

Streamline job site management with OxBlue + Procore

OxBlue and Procore offer instant access to job site imagery and data in one application.

ATLANTA — APRIL 2, 2018 — OxBlue has introduced a new project management software integration that increases efficiency by providing construction teams with the ability to instantly upload images to their Procore account.

OxBlue's integration with Procore streamlines the construction process by collecting photography and data and storing it in one application. Eliminating the need to navigate between several platforms because developers, owners, and general contractors can choose exactly which OxBlue images to upload into Procore.

Uploading time-lapse images directly from the OxBlue interface provides easy access to construction teams and stakeholders, who can now easily view and organize all project information, such as photos, specs, drawings, and documents, in one system.

OxBlue and Procore deliver efficient and immediate access to the entire time-lapse catalog and project data, which simplifies progress tracking by easily allowing users to compare photography to the project's critical milestone dates.

With this seamless integration, everyone on the project can stay updated and make key decisions quickly, allowing the project to move forward and stay on schedule.

For more information, visit the Procore page on the OxBlue website.
