CLOUDSYNC PERFECT COMPANION APP FOR ADMINS

- **CloudSync** works with Salesforce out of the box
- In-built templates auto-magically migrates configuration meta data and business data from Sandbox to Production or Production to Sandbox.
 - Saves time for Administrative/Development team
 - Deliver projects faster and on time
 - Reduce errors during data migration

SALESFORCE DEVELOPERS AND ADMINS BE A SUPER HERO

Tired of using Excel, Data Loader to migrate complex data?

Let **CloudSync** save you time...

One click synchronize data between multiple Salesforce environments.

Production to any Sandbox.
On-demand or Batch mode

Zero code. Seamless flow of Quote-to-Cash data within Salesforce AppExchange applications.

Real time data flow between partner/reverse/distributor/Salesforce organizations.

CLOUDSYNC BENEFITS

- Comes bundled with ready to use templates for most of Salesforce Standard objects
- Data migration is on-demand and is based on SOQL queries
- Extensible architect based on templates that is easy to use and can be extended for various use cases
- **80% Savings.** Reduce time and cost to migrate configuration meta data from Sandbox to Stage and/or Production
- **Error-free Migration.** Since the migration is done automatically, the data is exact replica of the source
- The migration can be performed by anyone as it does not require complex mapping. Just click, and it is done

USE CASE #1: DATA REPLICATION

- Development team needs a Developer Sandbox. Setting up Development Sandbox is easy. Getting meta data and business data for development/testing purposes can be challenging. CloudSync can replicate data from production or staging to development with a single click.
- You just created few records in Stage environment. Need to move the data to production? CloudSync can help you move data.

USE CASE #2: APPEXCHANGE APP METADATA

- Do you have any AppExchange Applications on your Salesforce instance?
 - You can easily migrate AppExchange application meta data as well as well as business data between environments using connectors.
 - Pre-built connectors now available for:
 - Salesforce CPQ
 - Apttus CPQ
 - Apttus CLM
 - And more...

USE CASE #3: INTEGRATED SUPPORT FUNCTION

- User is facing production issue. Fixing a production issue in production environment is risky.
- CloudSync is bundled with feature to request for Support from respective screen.
- CloudSync automatically replicates the record (and related records) into Development Sandbox for the development team to provide a fix.

Thank you!
