

ChargerWay

**“How to Get Great Results
From Your ChargerWay
Wireless Charger!”**

Here Are 4 Great Things That Your ChargerWay Wireless Charger Will Do For You!

1. **The moment you use your ChargerWay Wireless Charger**, you will notice how fast it charges your device. That is because of the 5-watt coil which transmits over 70-percent charge to your device without cables!
2. **Imagine placing your phone down ...** and then totally spacing out and forgetting that it has been charging all day! You never have to worry about that with the ChargerWay! It automatically detects when your phone is fully charged and shuts-off when needed.
3. **When you use your ChargerWay while on the move**, simply use the Micro USB cable included and effortlessly connect to a variety of power sources. Whether a desktop, laptop or wall charger, easily power on your ChargerWay and charge away!
4. **Your ChargerWay contains really cool looking blue and red LED lights.** The light adds a nice touch when you are charging and the lights are dimmed down.

Now that you understand the results you will experience and the technology that we are using ... I bet you'd like to know how to get the best possible results from your ChargerWay ...

How to Get the Best Results When Using Your ChargerWay Wireless Charger!

Here's how to get the best results using your new ChargerWay Wireless Charger...

- 1. We strongly recommend you connect your ChargerWay to a DC 5V-2A input.** A red light inside the charger will light up and indicate ready and stand-by modes. The wireless charger will automatically stop charging and regulate itself once your device is fully charged.
- 2. Make sure that your phone or device is positioned properly on the center of the wireless charger,** otherwise it won't charge as fast as you would like! We also suggest that you use a case for your phone which is less than 4mm in thickness.
- 3. We have a really amazing safety feature:** Your wireless charger will automatically quit charging once your device has reached 100% charge! It also has a feature which proactively limits the heat and friction which magnetic induction produces in order to protect your phone.
- 4. Want to bring it with you on the go?** It's easy with our included Micro USB Cable. Simply take your USB cable with your charger and easily connect to any desktop, laptop or compatible wall charger. That's all there is too it!

If your charger and your phone feel warm after charging, this means it's working perfectly as designed!

Thanks to the innovation of magnetic induction, this warm feeling is a sign that your wireless charger is working smoothly!

FAQ's About ChargerWay Wireless Charger

Q: Do you have a video about this product that I can watch?

A: Yes! We made a really good video for you, about how to get excellent results from your ChargerWay in 60 seconds! Go here to watch it:

<https://www.youtube.com/watch?v=hTK9Sy1dJ5w>

Q: Why does the wireless charger get warm?

A: It's the way magnetic induction works ... but you do need to be careful about where you place your phone! We decided to make our wireless charger with a bigger charging coil, which means the charging sweet spot is larger. However, because of the very short distances in charging with magnetic induction ... we recommend you always place your phone right in the center of the charger.

Q: Why am I having trouble charging my phone?

A: Due to the short range in wireless charging technology, the phone and the charger must be really close to each other in order to transmit energy. Our charger is designed to work with all sorts of cases! However, we recommend you use a case that's no thicker than 4mm. Anything more than 4mm must be removed before charging. Metals, magnets or very thick materials will disrupt the charging process. Rubbers, plastics, Ultra Hybrids, TPU's, PP's, PC's and Liquid Crystal cases less than 4mm thick will work best!
