Akkadian Provisioning Manager™

Simplified Provisioning

Akkadian Provisioning Manager™ brings the "unified" to provisioning in Cisco Unified Communications. No other solution makes it easier or faster to provision across multiple applications, all from a single, secure web interface. From Communications Manager to WebEx and Spark, find out how Akkadian Provisioning Manager helps you to simplify provisioning.

Steps to Simplifying Cisco UC Provisioning

It's clear at every step that we built Akkadian Provisioning Manager™ to simplify.

1. Download & Deploy Akkadian Provisioning Manager

Start with a free, 30-day trial. Download and deploy Akkadian Provisioning Manager in under an hour, right from the Akkadian Labs website.

2. Customize Akkadian Provisioning Manager to Your Environment

Easily build jobs and templates based on your business needs and environment. Out-of-the-box features like global variables and location-based templates make template building within Akkadian Provisioning Manager a snap.

3. Provision Across Multiple Servers and Applications

Using one, intuitive interface, Akkadian Provisioning Manager allows you to provision across your UC ecosystem, including CUCM, Unity Connection, Cisco Contact Center Express and Cisco Contact Center Enterprise (Packaged).

Once your templates are built, you can provision the following in under 40 seconds:

- User
- Device
- Single Number Reach
- Contact Center Agents

- Voice mail
- WebEx
- Jabber
- Spark

4. Simple, Secure, and Efficient Results

Akkadian Provisioning Manager's easy-to-learn, streamlined process means that help desk employees can provision. Role-based access means voice administrators feel safe letting them. Our growing toolset within Akkadian Provisioning Manager includes Phone Swap, Remote Phone Control, and our Self-service Portal to help you work smarter, not harder.

Akkadian Provisioning Manager™

Key Features & Tools

Bulk Provisioning

Onboard or off-board groups of employees in one step.

Remote Phone Control

With Akkadian Provisioning Manager, there's no need to physically access the phone. Remotely view desk phone screens, place calls, and change settings.

Visual Phone Editor

Ever wish you could move lines and speed dials around with your mouse? Now you can.

Phone Swap

Swap old phone models for new phone models in one, easy step. We have an app for that.

Self-service Portal & Self-provisioning

Via a web-based portal, employees manage their own lines, intercoms, and speed dials.

Automation & Integration

Powerful automation eliminates manual tasks from the provisioning process. The API offers platform integration for zero-touch provisioning.

Directory Number Management

There's no need for keeping track of available directory numbers on spreadsheets. Akkadian Provisioning Manager offers real-time directory number availability during the provisioning process. DN pools support both manual and automatic directory number assignment.

System Requirements

- VMware ESXi 4x+
- Cisco Unified Communications Manager 8.x – 11.x
- Cisco Unified Contact Center Express 9.x – 11.x
- Cisco Packaged Contact Center Enterprise 10.5 – 11.x
- Cisco Unity Connection 8.x - 11.x
- Internet Explorer 9.x+ • Mozilla Firefox 20+ • Chrome
