PRT Releases Small Diameter Cutter Purchasing Workbook

Guide for contractors reviews features to consider when choosing a cutter.

RANDOLPH, NJ—June 12, 2018—Pipeline Renewal Technologies, a distributor of underground pipeline rehabilitation solutions, released “Making the Cut: A Rehab Contractor’s Guide to Small Diameter Cutter Purchasing.” This workbook explains cutter features and the strengths and weaknesses of the various styles on the market. It also serves as a convenient place for readers to store relevant notes and decisions.

Contractors can use this workbook to determine which features they would like in a cutter and then rank them by importance. They can then utilize it during product demos to take notes on which models and suppliers meet their needs.

“There are so many cutter models, manufacturers and suppliers out there to consider,” says Steve Webster, Business Unit Manager for Pipeline Renewal Technologies. “The decision to buy a new one has major consequences for your work. We created this workbook to streamline the decision-making process, so contractors know they’ve made the right decision for their business.”

The workbook can be found at: <http://inbound.envirosight.com/choose-the-right-small-diameter-sewer-cutter>. This guided purchasing workbook was created as part of Pipeline Renewal Technologies’ commitment to providing educational and informational resources for wastewater utilities and rehabilitation contractors..

About Pipeline Renewal Technologies.

Pipeline Renewal Technologies is an EnviroSight company focused exclusively on the pipeline rehabilitation market. The company offers technologies for no-dig structural lateral connection; drain and mainline cutting; durable point repair; video drain flushing; and process measurement. A strong emphasis on support makes Pipeline Renewal Technologies the partner of choice for municipal contractors looking to gain a competitive edge with innovative technologies. Pipeline Renewal Technologies is a member of NASTT and NASSCO.
