EagleView Disrupting the Roofing Industry in the United Kingdom *New roof measurement technology benefits roofers in London and Bristol Regions*

Bothell, WA (July 24, 2018) – Eagle View Technologies (EagleView®), the leading provider of aerial imagery and advanced property data analytics for the government and construction markets, recently entered the UK market in the London and Bristol areas by offering the EagleView [PremiumReport®](#). Roofing professionals can now order highly detailed and accurate roof measurement reports online, eliminating the need to visit the property prior to providing a quote. These reports save contractors both time and money in their overall bidding process.

The EagleView [PremiumReport](#) not only offers roofing professionals detailed measurements without climbing a roof, but also high-resolution aerial imagery, providing a 360-degree view for a complete understanding of any given property. These reports provide roofers with the data they need to price a job, including roof area, pitch, hips, ridges, and more.

As part of expansion plans into the U.K., [EagleView](#) flew the London region in the autumn of 2017. Since then, EagleView has expanded to the Bristol region, totaling over 2500 sq. kilometers of imagery to be used to develop roof reports.

“We’ve seen this technology benefit the roofing industry in the United States and we’re just starting to see the success it will have in the United Kingdom as well,” said EagleView CRO Rich Spring. “The further we expand in the UK, the more people and businesses we’ll be able to help succeed.”

EagleView plans to continue to capture high-resolution aerial imagery of all of the U.K. so that all roofing professionals will improve their businesses’ bidding process.

For more information about EagleView roof measurements, visit www.eagleview.co.uk or contact Melissa Mazurek at (585) 444-2504 or melissa.mazurek@eagleview.com.

About EagleView

EagleView is the leading provider of high-resolution aerial imagery, property data analytics and structural measurements for government agencies, insurance carriers, roofing contractors and energy utilities. Using patented image capture techniques, 3D aerial measurement software and machine learning processes, EagleView helps customers answer questions related to millions of properties throughout the world. With a 60-petabyte library of oblique and orthogonal Pictometry® aerial imagery dating back to 2001 and the capacity to process tens of thousands of roof measurement reports per day, EagleView enables organisations to reduce field visits and adopt faster, safer and more cost-effective workflows. For more information, contact 0800 069 8405 or visit www.eagleview.co.uk/.
