GSI, Inc. Company Overview

Managed Services

Our clients have experienced an estimated 67.3% reduction in costs associated with maintaining their enterprise systems and related IT infrastructure using GSI's comprehensive suite of managed services for JD Edwards (AppCare), NetSuite (SuiteCare) and Salesforce (gForce).

- Experienced specialists – business, development, and technical
- Proactive monitoring, alerts, and system checks
- All-inclusive and à la carte plans
- Guaranteed staffing – illness-, vacation-, night-, weekend-, holiday- and resignation-proof
- Support for Apps, Dev, CNC, DBMS, OS and HW

Cloud/Hosting Services

Are you considering running your on-prem business applications (JD Edwards, e-Business Suite, PeopleSoft, etc.) in the cloud? Why wait? Running your business in the cloud has never been easier! GSI offers many cloud/hosting options to help meet your specific requirements including:

- Oracle Cloud
- Amazon Web Services (AWS)
- Microsoft Azure
- Private Cloud Hosting

JDE Cloud⁹

JDE Cloud⁹, a new cloud-based hosted service from GSI, Inc., offers enterprises the easiest and most cost-effective way to purchase, implement, customize, utilize and manage Oracle JD Edwards software. JDE Cloud⁹ offers enterprises the lowest barrier to entry for leveraging this critical application in a high performance cloud environment for just pennies on the dollar compared to traditional purchased solutions. The application and cloud infrastructure combination enables companies to scale their environment based on fluctuating or growing business needs.

GSI, Inc. Company Overview

GENIUS Advanced Monitoring

GSI's expert staff and GENIUS monitoring platform address the most challenging performance issues for JD Edwards EnterpriseOne and other applications, enabling users to realize optimal performance. The JD Edwards architecture features three "Layers": Web, Application, and Database. A problem with any layer could render the entire application unusable. With its deep understanding of JD Edwards, GSI has created multiple GENIUS modules, which provide critical insight into each layer of JD Edwards.

Types of Monitoring

- JDE Enterprise Servers – UBE and Business Function
- Web Servers – WebLogic, WebSphere
- Database Management System – Oracle, SQL Server, DB2
- Operating System – Linux, AIX, IBM i, Windows
- Network – Local Area Network and Wide Area Network
- EnterpriseOne Application – System Availability and Health

GENISYS

GSI's GENISYS load/stress testing application is used for system design, validation or expansion for any web-based business critical system. It's three core components include:

- Model – model system to simulate anticipated user loads and roles to help accurately size system.
- Measure – measure (baseline) current system against industry best practices. Provide recommendations for optimal performance.
- Maximize – find the maximum load or breaking points in the system.

RapidReconciler®

Over 200 companies in 17 countries use RapidReconciler, to streamline their JD Edwards inventory, in-transit and received not vouchered (RNV) reconciliation processes. By using RapidReconciler, companies are able to easily identify the root cause of the issue and take corrective action, thereby minimizing future occurrences. RapidReconciler works in conjunction with any release of JD Edwards EnterpriseOne or JD Edwards World applications.

RapidReconciler®

- Improves inventory accuracy to 99.7%
- Reduces reconciliation time by an average of 76.3%
- Validates business processes and system configuration
- Provides historical "As Of" reporting

GSI, Inc. Company Overview

gShield Authentication

GSI's gShield Authentication protects your organization's mission critical information in JD Edwards, providing an additional layer of credentialed security when a user is logging in to the system. GShield Authentication uses two factor authentication (2FA) technology, also known as multi-factor authentication, to provide a second level of validation beyond your JD Edwards username and password credentials.

gShield Password Reset

With the release of gShield Password Reset for JD Edwards EnterpriseOne, organizations are now able to provide user self-service for resetting a forgotten password, without needing to engage the company's CNC administrator. Currently, resetting your JD Edwards EnterpriseOne password involves a call to your security administrator or CNC administrator to have them force a reset on your account. The gShield Password Reset Application creates a self-service solution that works seamlessly with JD Edwards EnterpriseOne, effectively removing the administrator from the process, allowing the individual user to request the password reset from the system directly and, after authentication of the request, force the reset directly.

Rapid Approval

How much time do you spend each week processing approval requests, in Salesforce, one at a time? Wouldn't it be great to have a configurable component on your home page showing you how many approvals are in your queue? Wouldn't it also be great to be able to view each approval record in a single screen without having to open, approve, close, open, approve, close...? Well now you can, with Rapid Approval™ from GSI.

GSI, Inc.
