TRC Chosen to Provide Array of Integrated Services on Midship Pipeline Project

LOWELL, Mass. – [TRC Companies Inc.](#), a leading provider of end-to-end engineering, consulting and construction management solutions fueled by innovative technology, has been awarded a pair of contracts from Midship Pipeline Company LLC for the Midship Pipeline Project in Oklahoma – one for environmental consulting, engineering and field services and the other a stem-to-stern Engineer, Procure and Construct (EPC) contract for three compressor stations.

"We are excited to partner with the Midship Pipeline Company on this important project," said Ed Wiegele, president of TRC's Oil and Gas Sector. "By providing integrated services throughout the lifecycle of the project, we will streamline the work and help minimize risk."

The [Midship Pipeline Project](#) consists of a new 36-inch mainline natural gas pipeline that stretches 199 miles through Oklahoma. TRC will perform engineering, mapping, civil surveying, environmental and right-of-way services on that portion of the project. Three mainline compressor stations, two lateral pipelines, a booster station and associated facilities will also be built.

The project, which recently received its Certificate Order from the Federal Energy Regulatory Commission, is scheduled to be put into service next year.

"Midship is a great project and we're pleased to have TRC working on it," said Jim Privett, Vice President of Project Management for Midship Pipeline Company. "This pipeline will deliver an enormous economic boost to the state of Oklahoma – during the design and construction phase and when it's in operation, providing a valuable natural resource with a safe, efficient and economical path to the marketplace."

Sunland Construction will serve as construction contractor on the compressor stations.

"Sunland is looking forward to teaming up with TRC on this important project," said Craig Meier, President of Major Projects for Sunland.

Once completed, the Midship Pipeline will have the capacity to bring 1.44 million dekatherms of natural gas per day from the Anadarko Basin in Oklahoma to the growing Gulf Coast and Southeast markets.
