MyOwConference is the First in Market to Make Large-Audience Webinars Available without Adobe Flash Player

The international webinar service MyOwConference is the first among other similar services to give up Adobe Flash Player for audio and video streaming to large audiences of up to 5000 people.

Adobe Flash is the technology that was used by practically all webinar platforms for streaming live video and audio. In July, 2017, Adobe has officially announced Flash technology outdated.

Webinar services that use Adobe Flash Player are actively researching the more advanced technology for transmitting video and audio between browsers called WebRTC (Web Real-Time Communications). MyOwnConference is among these.

Several services released a version without Adobe Flash for webinars and conferences of 5 to 10 participants. However, MyOwnConference made Adobe-Flash-free webinars available for large audiences.

Now neither presenters nor attendees need to install and set Flash for broadcasting or conferencing. The attendees have long been participating in webinars without using the Flash or a mobile app installation – everything works directly in the browser. And now, the presenters don't need to use the Flash either.

Proprietary MyOwnConference development offers better quality of video and sound for larger audiences without additional plugins and is more sustained when connection is unstable.

It also has other advantages:

- Minimum delay of data transfer, less than a second for hosts and 3 to 7 seconds for participants
- Works via mobile browser without special applications
- High quality sound
- Robust operation.

For now, the update is only available for new MyOwnConference users. Implementation of the new technology for all users is coming soon.

About MyOwnConference

MyOwnConference is an international developer of its online platform for hosting webinars, online conferences, trainings and any kinds of Internet meetings, which are possible to be held independently from the location and number of participants. Annually, it ensures hosting over 450,000 events.
