

Online Printer Expands into New Realm: Ultraviolet Printing *Consumers' Changing Needs Forces Printer to Rethink Production*

SAN LUIS OBISPO, CA, October 8, 2018 – As the need for traditional printing ebbs and flows, printers must keep up with growing trends to stay relevant in today's industry. One of the newest trends in the printing industry is ultraviolet (UV) flatbed printing. UV printing is unique in that it uses ultraviolet light to instantly cure special inks onto almost any type of surface from wood to metal and even glass.

The online printing company DocuCopies.com has taken a proactive approach to this new trend and has added two UV printers to its fleet of digital presses. With two UV machines, the company can keep up with growing demand and still maintain fast production times. They have begun this new venture by offering an assortment of UV printed promotional products: pens, drink coasters, car magnets, pocket magnifiers, and mouse pads with more products on the way.

DocuCopies.com is an online printing company that originated as a traditional walk-in printer in the 1980's but shifted gears during the internet revolution and has become one of the top online only printers. They offer a variety of products from cheap 7¢ color copies to books, postcards, brochures, and even mailing services.
