

Configure | Innovate | Automate | Streamline

For a Best-in-Class Enterprise

Our Mission

Our mission is to provide innovative, configurable, flexible, cost-effective solutions to common business challenges, enabling our clients to save time, increase productivity, minimize costs, and maximize their return on investment.

What We Do

Founded by Oracle/PeopleSoft veterans, Smart ERP Solutions® is a unique organization in the Enterprise Business Applications space providing innovative, cost-effective, and configurable solutions that efficiently extend the capabilities of ERP systems to meet specific business process needs. SmartERP enables clients to seamlessly integrate their people, processes, applications, and data, across an enterprise, enabling the organization to streamline its operations and support business growth.

Solutions

Business applications that offer organizations an end-to-end solution providing the right design and implementation from start to finish.

Services

A 24/7 seasoned and experienced staff of experts to help you implement your business solutions efficiently and effectively at a cost-effective rate.

Cloud

Cloud applications provide solutions built on proven enterprise class architecture that enable high configurability and ease of monitoring.

How we solve your business challenges

Issue: Complex User Interface?

Complex business processes, growing customer needs, demanding software requirements from various industries, and native technology limitations have led to complex user interfaces, with many unnecessary tabs and fields, making navigation time consuming and especially difficult for casual users.

Solution: Rich User Experience

We believe in user interfaces that meet specific functional requirements and are simple to understand, visually appealing, fast and easy to use. Our add-on solutions enhance the user experience, increasing productivity by providing greater ease of use, automating business processes, and simple intuitive user interfaces tailored to your enterprise.

Issue: Complicated or Paper-Based Business Processes?

Complex and paper-based business processes are not only manually intensive but also time consuming and error prone. With paper forms, policies and hard-copy documents there is also little visibility and virtually no accountability.

Solution: Enhance Productivity, Paperless Processing

Business processes that are simple to understand and use enhance productivity—the benefits of going paperless are tremendous. What is the value of going paperless? It's time savings, reduced errors, enhanced visibility and accountability.

Issue: Enforcing Governance Too Complex?

Segregation of Duties, Internal Control, Sarbanes-Oxley (SOX) Compliance, data-level security and approvals are aimed at applying checks and balances on business processes, but enforcing these is very complex and costly.

Solution: Security, Compliance and Approvals

Configurable application-level risk mitigation, segregation of duties, business process management that provide audit trails and secure workflow automation. Enable the key elements of data integrity and security to help enforce controls and assure policy compliance.

How we solve your business challenges

Issue: Manual Business Processes?

Manual business processes are not only difficult to understand and enforce but are also costly due to wasted time and the rework required to correct errors.

- High cost of manual processes
- Inconsistent or unenforced approval policies and procedures
- Lack of accountability, control and compliance
- Insufficient levels of visibility and status
- Risk of fraud and error
- Best practices in business process not known or implemented
- Time drain on personnel due to transactional issues versus value-add activities
- Difficult to manage tasks that span multiple systems

Solution: Rich User Experience

We can help automate critical manual steps and increase productivity and accuracy, allowing your organization to do more with less. Using Smart Solutions, you can automate and streamline entire business processes.

Automation drives tactical and strategic value:

- Reduced overall processing time
- Reliable repeatable process that is easy to understand
- Redeployment of human resources to higher value tasks
- Increased productivity
- Reduced training costs
- Enhanced visibility, accountability and compliance

Issue: Costly and Complex Traditional Analytic Solutions?

Many analytic solutions are difficult to use, cost millions of dollars and require long projects to implement and configure.

Solution: Transactional Analytics and Business Intelligence

Our analytics solutions are low cost and quick to implement. They embed directly into your ERP system, providing transactional analytics and embedded dashboards with built-in drill back, bringing analytics where you need them—inside your ERP.

How we solve your business challenges

Issue: Lack of Application Integration?

ERP technology does not offer an integrated solution but it amplifies the need for integration. Typically enterprises have serious integration challenges when they attempt to incorporate other applications with their ERP system.

Solution: Enterprise Integration

Integrated business processes, not individual business functions, generate business results. We enable clients to seamlessly integrate their people, processes, applications, and data, across an enterprise, enabling the organization to streamline its operations and support business growth.

What our clients say

The new system is providing tremendous benefits to the University and the add-ons provided by SmartERP accelerated our project and introduced important new functionality into the standard PeopleSoft application.

Ed Below
Wesleyan University

After the first day of entering orders using SmartDoc, I have to look at it like this: I cannot compare it as going from a "Chevy to a Cadillac." They can both get us from point A to point B in the same amount of time. I think it's more like going from a Bicycle to a Harley!
