PRESS RELEASE

Mobile Imaging Application available for Quantum ERP Software

San Diego, CA – October 30, 2018 – Component Control announced today immediate availability of Mobile Imaging for Quantum ERP. Mobile Imaging enables the collection, editing and grouping of images, and associates them directly with Quantum ERP inventory, contracts and document imaging software.

Quantum Control's Mobile Imaging app connects directly to Quantum through our supported API and is a pure mobile application that allows the recording and storing of a variety of images, and lets users associate them with orders, stock lines, tasks and job cards. Leveraging Quantum's Document Imaging architecture, Mobile Imaging records HD pictures and supports a pure paperless environment for things like 8130's, Contracts, Agreements, Part inspections, Part Shipment and Part Receiving.   Adding, grouping, tagging, and linking images directly from mobile to Quantum has never been easier. Mobile Imaging does more than just images, enabling the scanning of bar codes and streamlines data collection by directly linking the data into Quantum ERP.

Mobile Imaging 2.0 is available now on Android and a beta version is available for Apple IOS. Contact sales@componentcontrol.com for pricing information.

About Component Control

Component Control, a CAMP Systems Company, is a leading developer and provider of MRO and Logistics Software solutions for the aviation industry.
