## FARM TO FORMULA

Our clinically proven technologies are just as pure and clean as they are skin-altering. We apply green science principals to everything we do utilizing farm-fresh, organic, vegan, gluten-free, cruelty-free and environmentally friendly ingredients.

Lots of beauty brands boast “fresh” ingredients, but we have farm partnerships that yield the ingredients that go into our products. We are passionately working with farmers and their land around the globe in an effort to reduce our ecological footprint while supporting smaller-scale farming communities. Ultimately, we want our products to tell a story, an ethical one.

## TODAY'S MICROBIOME TECHNOLOGY TODAY

Your skin microbiome is a group of living organisms that make up your skin's foundation. We're using our expert understanding of the microbiome to revolutionize how we develop products to help improve the skin's health and appearance.

Today, there is immense interest in how the human microbiome interacts with and affects our health and wellness, as well as the related fields of prebiotics, probiotics, and postbiotics. It seems there is something new we are discovering every day, shedding more light on this fascinating, invisible world of human microbes.

So, unlike many cosmetic ingredients that kill good microbes along with the bad and disrupt the natural skin barrier, our next-generation personal care formulas carefully nurture friendly bacteria, helping them outcompete the harmful ones. This approach looks like the best “all round” solution in the treatment of many skin issues.
