FOR IMMEDIATE RELEASE

RSC Solutions Completes SOC 1 Type I, SOC 2 Type I Examinations and ISO 27001 Certification

Independent audits, performed by Assure Professional, verify the Northern New Jersey based technology services company has internal controls and processes in place to protect its Outsourcing Solutions system against cybersecurity threats.

Greenbay, WIS. (November 27, 2018) - Assure Professional, a leading cybersecurity, assurance and compliance solutions provider, announced today that RSC Solutions, a Northern New Jersey based technology services company, has successfully completed Service Organization Controls (SOC) 1 Type I and SOC 2 Type I examinations and International Organization for Standardization (ISO) 27001 certification. RSC Solutions Outsourcing Solutions system is SOC 1 Type I and SOC 2 Type I compliant, in accordance with the attestation standards established by the American Institute of Certified Public Accountants (AICPA.)

These top-tier examinations demonstrate that RSC Solutions has the necessary internal controls and processes in place to protect its Outsourcing Solutions system against cybersecurity threats.

ISO 27001 is a globally recognized benchmark for the establishment and certification of a secure Information Security Management System (ISMS.) The standard specifies the requirements for establishing, implementing, operating, monitoring, reviewing, maintaining and improving a documented ISMS within the context of the organization's overall business risks.

"The ISO 27001 ISMS standard is a highly sought certification, which demonstrates to clients that security of information in the organization is of utmost importance," said Juan Vargas, Assure Professional Senior IT Security Auditor and ISO 27001 Lead Auditor. "This management system includes a framework of defined policies and procedures which include client and regulatory compliance considerations, as well as physical and technical controls to address the Company's information risk management processes and posture. RSC has successfully demonstrated that they take Security of Information seriously."

To achieve SOC 1 Type I and SOC 2 Type I compliance, RSC Solutions went through a detailed examination process to verify the existence of implemented controls that affect the integrity of the system, as it processes client data, and protects the confidentiality and privacy of the information that is processed.

SOC 1 Type I compliance demonstrates that a service organization has appropriate controls designed and in place as of the date the report is issued. It reports on a description of a service organization's system and the suitability of the design of controls.

SOC 2 Type I audits are based on the existing SysTrust and WebTrust principles. The purpose of a SOC 2 report is to evaluate an organization's information systems relevant to security, availability, processing integrity, confidentiality or privacy.

"Our focus is on security across our organization, and we're proud to be internationally recognized as a leader in information security and data protection," said RSC Solutions Chairman & CEO Mark Arzoomanian. "Data security is critical to our customers and we are confident that this audit reflects the results of our strong commitment to maintaining security at the highest level."
