

For Immediate Release

Radiant Announces 2019 Series of Educational Seminars on Light and Color Measurement

REDMOND, Wash. – February 7, 2019 —

Radiant Vision Systems, a leading provider of visual test and inspection solutions for light sources and displays, announces the first events in its 2019 series of half-day “[Light & Color Measurement](#)” seminars. Seminars are led by Radiant’s team of photometric

imaging experts, and include live demonstrations of display testing, backlit symbol evaluation, and light source measurement using Radiant [TrueTest™ Automated Visual Inspection Software](#). The seminars will take place at various dates and locations, with the first occurring on March 6 in Detroit, Michigan, and April 16 in Santa Clara, California.

Lighting and displays have become an integral part of electronics, automotive, aerospace, and other industries. Manufacturers are adopting modern LCD, LED, and OLED technologies to develop innovative interfaces, more efficient & safer operations, and improved user experiences. To ensure positive ROI, manufacturers are tasked with understanding how illuminated components impact the overall design, quality, and function of these products. Responding to the success of its 2017 and 2018 seminar events, Radiant will again offer education for manufacturers of light-emitting products with 2019 seminars throughout North America. Radiant’s live seminar series offers a fundamental introduction to photometric principles of light and color measurement, and presents imaging solutions that can accurately simulate human visual perception of light to ensure relevant evaluation of product design and function. Seminars will include examples of applications across industries, from augmented and virtual reality display testing to headlamp measurement to instrument panel analysis.

Attendees of Radiant’s seminars will learn:

- The fundamentals of light and color measurement
- How the human eye responds to light
- How to capture and quantify meaningful qualities of light and color using image-based photometric measurement systems
- The components of a successful light measurement system
- Applications and considerations for image-based evaluation of displays, backlit symbols, and light sources

Demonstrations of photometric light source and display measurement will be provided throughout each seminar using Radiant [ProMetric® Imaging Colorimeters and Photometers](#), [ProSource Software](#), and [TrueTest Software](#). Attendees will have the opportunity to discuss

applications with the Radiant team following each presentation. All seminars will be hosted between 10AM-1:30PM and are free to attend, with complimentary lunch and refreshments provided to all attendees.

About Radiant Vision Systems

Radiant Vision Systems works with world-class brands and manufacturers to deliver creative visual inspection solutions that improve quality, reduce costs, and increase customer satisfaction. Radiant’s legacy of technology innovation in photometric imaging and worldwide install base date back more than 25 years and address applications from consumer electronics to automotive manufacturing. Radiant Vision Systems product lines include TrueTest™ automated visual inspection software for quality control, and ProMetric® imaging colorimeters, photometers, and light source measurement systems. Radiant is headquartered in Redmond, Washington, USA, with strategic offices in California, China, and South Korea. Radiant has been a part of Konica Minolta’s Sensing Business Unit since August 2015. For more information, visit www.RadiantVisionSystems.com.
