

Simco-Ion Releases the IQ Power FantomTM, the Smartest, Strongest Ionized Blower on the Market
The Most Advanced Static Neutralizing Blower Designed for the Industrial Market

Hatfield, PA: (February 2019) - Simco-Ion is proud to introduce the IQ Power FantomTM Wide-Format Ionizing Blower.

This newest addition to the IQ Power family brings the advanced technology of IQ Power to blowers, offering superior ionization performance.

The Fantom is the strongest and widest blower on the market. With 600 cfm and a 20-inch outlet, the Fantom has an effective range of 20 feet and can discharge wider surfaces than any other blower on the market. The

Fantom is also extremely easy to maintain. It has a self-

cleaning system that automatically initiates when powered on and can be manually triggered as well. Additionally, a replaceable ionizer assembly extends the product lifetime. The Fantom will be available in a 120V and 230V model.

Its raw performance isn't the only thing that sets the Fantom apart from its competitors. As a part of the IQ Power family, this blower can be monitored and controlled by the IQ Power Control Station. While this is an advantage of all IQ Power products that connect to the Control Station, it's especially useful for a blower since they are generally mounted out of reach. In addition to remote on/off capabilities, connecting with the Control Station provides the ability to adjust balance, activate the self-cleaning feature and monitor real-time performance.
