

Vista Pipe & Supply Charts an Initiative to Increase Visibility and Accountability in the Oilfield Supply Chain with Internet of Supply Chain (IoSC) Provider Rig CallOut

HOUSTON, TX – Vista Pipe & Supply, a prominent and trusted supplier of OCTG, HDPE and line pipe to the oilfield, announced today, an innovative move to broaden their already robust service offering with an Enterprise License for Rig CallOut’s IoSC application. Rig CallOut provides advanced geo-location technology and an incredibly simple to operate, cloud-based communication platform. The technology brings unprecedented visibility and accountability to the oilfield supply chain resulting in incredibly reliable shipment ETAs, reduced Non-Productive Time (NPT), and increased profitability for Vista Pipe’s oilfield customers.

Rig CallOut allows suppliers, trucking companies and oilfield end users to communicate exact details of shipments in one place. From detailed product load info to time stamps of pick-ups and stops, the application allows everyone in the supply chain complete transparency in communication, location details, ETAs and more, resulting in more profitable operations. The technology creates accountability and fosters reliability, allowing Vista Pipe to provide industry leading on-time shipments to their customers.

Vista Pipe’s decision to partner with Rig CallOut as an advanced vanguard of the technology is progressive and representative of the company’s overall reputation as a superior supplier of tubular goods and line pipe in the oilfield. “Contracting with Rig CallOut just makes sense for our company. We have been searching for a tool to help us increase accountability, reduce expenses, and improve our service levels; and Rig CallOut does exactly that. It brings communication to a level we’ve never experienced. As an Enterprise License holder, we are excited to share this revolutionary technology with all the trucking companies we use as well as all the oilfield companies we serve,” said Tyler Hout, Vista Pipe President.

With the Rig CallOut app, users enter details of their shipments and can add everyone involved in a delivery to the system. This allows the supplier, trucking dispatch team, driver, and end user to receive automated updates and up to the minute details. Which, in turn, allows the workers expecting the deliveries to plan for the arrival of their products down to the minute. The application puts everyone in the loop, so the second a shipment slows everyone knows, giving them time to adjust scheduling.

“Rig CallOut is going to eliminate so many communication problems we previously faced every day. Knowing exactly where a shipment is in the delivery process will eliminate countless phone calls; and will

help our customers prepare for delivery at a positively 'exact' time. This is unprecedented in the oil and gas industry," Vista Pipe's CEO continued.

"'Minutes are millions' in the oilfield, and late deliveries not only halt operations, but also severely deplete profits, and can cripple vendor relationships," explains Rig CallOut CEO Ryan Hunt. "Our technology grants a level of total visibility never seen before in the oilfield. Everyone can now see a shipment's location and receive an exact real-time ETA, allowing the workers in the oilfield to plan deliveries down to the minute and eliminate costly Non-Productive Time (NPT). Vista Pipe's adoption of the Rig CallOut application is sure to improve their client relationships and will help them as they strive to achieve the coveted position of the best supplier of OCTG and pipeline products."

About Vista Pipe

At Vista Pipe, our primary focus is our customers. We strive to provide the best products on the market while keeping our overhead as low as possible in order to pass that savings on to our clients. We firmly believe providing the best customer service coupled with excellent cost control measures will allow us to remain a top supplier of oil country tubular goods, HDPE and line pipe products into the future.

About Rig CallOut

Rig CallOut is a first of its kind IoT technology using advanced GPS and a robust communications platform to connect the entire supply chain within the Oil & Gas Industry. The company is bringing visibility to the industry unlike anything ever experienced before. Learn more about this technology at www.rigcallout.com
