

CONVENIENT, SECURE, EFFICIENT ACCESS TO S-A-A-S APPLICATIONS

Your staff needs access to multiple Software as a Service (SaaS) applications to do their jobs. And with more apps, comes more logins to manage, which can cause frustration and often leads to practices that threaten data security. ConnectOne makes it simpler and safer for users to access the apps and data they need, anytime, anywhere. A device-agnostic tool, ConnectOne offers a simple user-friendly dashboard for staff to use. With ConnectOne you can:

Strengthen Security & Compliance

- One secure login enables access to multiple applications
- Create, document, and enforce access policies based on criteria such as user, location, and application
- Secure accounts with Multi-Factor Authentication (MFA) if required

Streamline Access Management Operations

- Centralize Access Management for all users, all directories, and all applications
- Accelerate application rollout, new employee onboarding and deprovisioning
- Reduce access-related helpdesk requests by 50% or more through self-service password reset for end-users

Drive Workplace Efficiency Gains & User Productivity

- Onboard new users in minutes and modify permissions in real-time for rapid application access
- Enable users to access all apps from a single, secure portal from any device and location
- Reduce staff frustrations with forgotten passwords and boost productivity

ConnectOne is available in two flexible options:

OPTION 1: INITIAL SETUP

CareWorx can do initial setup for you on ConnectOne and your team can handle ongoing management of the system and users.

OPTION 2: ONGOING MANAGEMENT

CareWorx can set up, manage the system and provide ongoing support for you. Free up your IT team, while we handle ongoing onboarding/offboarding activities.
