## **CIRRASCALE MANAGED SERVICES TO SUPPORT NVIDIA DGX SYSTEMS, ALLOWING CUSTOMERS TO DEPLOY AI WITH EASE**

***Cirrascale to provide managed services to customers while leveraging partnerships with leading data center colocation partners in NVIDIA DGX-Ready Data Center program.***

**San Jose, CA -- GPU Technology Conference -- March 19, 2019** -- Cirrascale Cloud Services®, a premier provider of multi-GPU deep learning cloud solutions, today announced it has extended its managed services offering to include NVIDIA® DGX™ systems. The company will leverage its partnerships with several key colocation data centers that are part of the NVIDIA DGX-Ready Data Center program to deliver a Zero DevOps offering to simplify deployments, manage storage and networking, and provide other services.

“With the proliferation of artificial intelligence throughout healthcare, oil and gas, finance, and other key industries, NVIDIA DGX systems have experienced rapid adoption and companies want to experience the benefits of accelerated computing without needing to manage the actual hardware,” said David Driggers, chief technology officer, Cirrascale Cloud Services. “Our managed services offering for NVIDIA DGX systems allows these customers to get a full-service experience without their data scientists having to manage hardware. Why not let them do what they’re paid to do, and let us handle the DevOps?”

As part of its managed services offering for NVIDIA DGX systems, Cirrascale offers customers variable-term colocation services, high-speed networking, network management, lightning-fast storage options, cluster management, and provisioning services. Additionally, customers receive a flat-rate billing model with no long-term commitments as well as no ingress or egress fees on data movement in or out of the Cirrascale Cloud.

“By expanding its cloud and managed services offering to include NVIDIA DGX systems, Cirrascale is helping companies gain access to the AI tools and infrastructure they need to power their most important work,” said Tony Paikeday, director of DGX Systems, NVIDIA. “This approach enables companies to maximize the productivity of their AI developers and data scientists using DGX systems, without having to worry about managing data center infrastructure.”

Starting at \$1,499 a month for managed services of DGX systems through Cirrascale Cloud Services, customers can begin experiencing dramatic cost savings immediately. Interested parties are encouraged to visit <http://dgx.cirrascale.com> for more information.

### **About Cirrascale Cloud Services**

Cirrascale Cloud Services is a premier provider of public and private dedicated, multi-GPU cloud solutions enabling deep learning. The company offers cloud-based solutions for large-scale deep learning operators, service providers, as well as HPC users. To learn more about Cirrascale Cloud Services and its unique dedicated, multi-GPU cloud solutions, please visit <http://www.cirrascale.com> or call (888) 942-3800.
