## ENGINEERING, SCIENCE, TECH INFLUENCERS WILL GATHER AT THE CAIRN SYMPOSIUM

Leaders from Stanford, NASA, Intel, Converge With Peers & Entrepreneurs in Southern Utah

St. George, UT -- Pioneering thinkers from across disciplines are set to convene in a literal convergence of thought leadership in engineering, technology, science, and entrepreneurship. The [Cairn Symposium](#) takes place April 19, 2019 in St. George, UT. The rare format of Cairn Symposium goes beyond keynote speakers and breakout sessions to draw active participation and deep, spontaneous collaboration. The intent is to facilitate the collective sharing of ideas, nurturing the potential for enhanced mutual developments across disciplines that, in order to advance, need each other more than ever.

At the symposium, industry leaders from notable organizations across disciplines will personally interact with [thought leader panelists](#) of their peers. As they collaborate with each other, they'll also mingle with high-level entrepreneurs and venture capitalists who can lend marketplace-focused perspectives. The goal of Cairn Symposium is to facilitate the kind of collaboration that can only happen when people have unfettered access to each other, then take note of what transpires.

The cross-disciplinary nature of the symposium is evidenced by the diversity of its panelists and [sponsors](#), ranging from Silicon Valley tech giants, to leading engineers and biotech researchers. However, the rarity of the gathering and what it represents is also significant. Cairn Symposium is a microcosm for the convergence movement itself. While tools and concepts have been shared across disciplines for decades, the depth of that sharing is intensifying. What happens at the Cairn Symposium could have big implications for future developments in technology, biotech, engineering, and economic development that will have widespread effects on everyone.

Tickets for the Cairn Symposium are still available. Thought leaders who can contribute to the conversation should register at [CairnSymposium.com](http://CairnSymposium.com).

###

Cairn Symposium is an annual event held in St. George, UT that gathers thought leadership and other attendees from across disciplines of science, technology, engineering, and entrepreneurship. It includes collaborative thought leadership sessions, roundtable discussion, dinner, and optional recreation. Visit [CairnSymposium.com](http://CairnSymposium.com) for more information.
