

## phoenixNAP and Panzura Announce High Performance Solution for Multi-Cloud Data Management

**Panzura leverages phoenixNAP's servers based on the new 2nd generation Intel® Xeon® Scalable processors to offer its multi-tenant Vizion.ai solution**

**Phoenix, AZ, April 2nd:** phoenixNAP®, a global IT services provider offering security-focused cloud infrastructure, dedicated servers, colocation, and specialized Infrastructure-as-a-Service (IaaS) technology solutions, today announced its collaboration with Panzura, a global leader in enterprise multi-cloud file and data services. As one of the first providers to offer servers based on 2<sup>nd</sup> Gen Intel® Xeon® Scalable Processors, phoenixNAP will deliver a joint solution with Vizion.ai, Panzura's new multi-cloud data services platform.

Featuring significant performance and security enhancements compared to the previous generation Intel Xeon Scalable processors family, 2<sup>nd</sup> Gen Intel Xeon Scalable Processors offer improved capabilities for processing artificial intelligence (AI) workloads. Some of the technologies that enable this are Intel® Optane™ DC Persistent Memory and high memory bandwidth. Delivered via phoenixNAP's high performance global data center network, these technologies enable Vizion.ai to seamlessly process high-volume enterprise data and provide comprehensive insight into AI workloads.

*"By combining the multi-tenancy and scale-out hyperconverged cloud architecture of Vizion.ai solution and the performance enhancements from the 2<sup>nd</sup> Gen Intel Xeon Scalable Processor, phoenixNAP can deliver the best price/performance across all customers," said William Bell, Executive Vice President of Products at phoenixNAP. "The high core count per socket and Intel Optane DC persistent memory were some of the most significant features that enabled us to build a platform tailored to Panzura's needs. I am glad we had an opportunity to work together and demonstrate the power of Intel's latest generation processors."*

Vizion.ai powered by Panzura, delivers file search and Elasticsearch services allowing customers to simplify data management in a multi-cloud environment.

*"We are excited to collaborate with phoenixNAP and use the 2<sup>nd</sup> Gen Intel Xeon Scalable Processor to build a platform that follows our vision of providing a unified insight into complex enterprise data," said Jason McKinney, SVP, Alliances at Panzura. "Thanks to the advanced performance features, the platform enables Vizion.ai to work seamlessly across devices and applications, deliver the optimal performance and responsiveness and provide advanced ML capabilities bringing unparalleled insight to data. We are looking forward to continued work with phoenixNAP to offer the best multi-cloud data services including logs, security, ITOPS, customer 360 view and IOT data services."*

phoenixNAP is a Premier Service Provider in the VMware® Cloud Provider Program and a Platinum Veeam Cloud & Service Provider partner. phoenixNAP is also a PCI DSS Validated Service Provider and its flagship facility is SOC Type 1 and SOC Type 2 audited.

#### **About Vizion.ai**

Vizion.ai unlocks the power of multi-cloud data by making it easier to find and share data scattered across siloed public and private clouds. It provides a single, unified view of data across the enterprise, with powerful search, analysis, recovery, and control of multi-cloud data, enabling enterprises to rapidly collect, process and store information to drive insights and action at scale. Vizion.ai launched in August 2018 and currently has two services in its marketplace: Vizion.ai File Search Service and Vizion.ai Elasticsearch Service. Vizion.ai is powered by Panzura, the leader in multi-cloud file and data management, a \$68 billion market. The Panzura portfolio includes Panzura Freedom NAS and Vizion.ai, and its products and services are deployed in more than 7,500 enterprises in 33 countries.
