# WHY CONTRACT MANAGER?

There are four main reasons to use the **Contract Manager powered by AnyWare :**

1. To create a corporate memory & digital contract library
2. For contract version management
3. For a systemically designed approval process (workflow) ending up with certain internal consensus of each related functions & departments.
4. For a secure & lean infrastructure.

We believe that the process of finding the right vendor is not lasting as long as the process of signing the contract. There is always a requisite to re-fill & correct the template contract and control it with various departments & related managers than sign it after consensus. In addition to this process; there is the tedious extra time spending period whilst the constant traffic of hardcopies during the effort of finalizing the content. The endeavor usually ends up with;

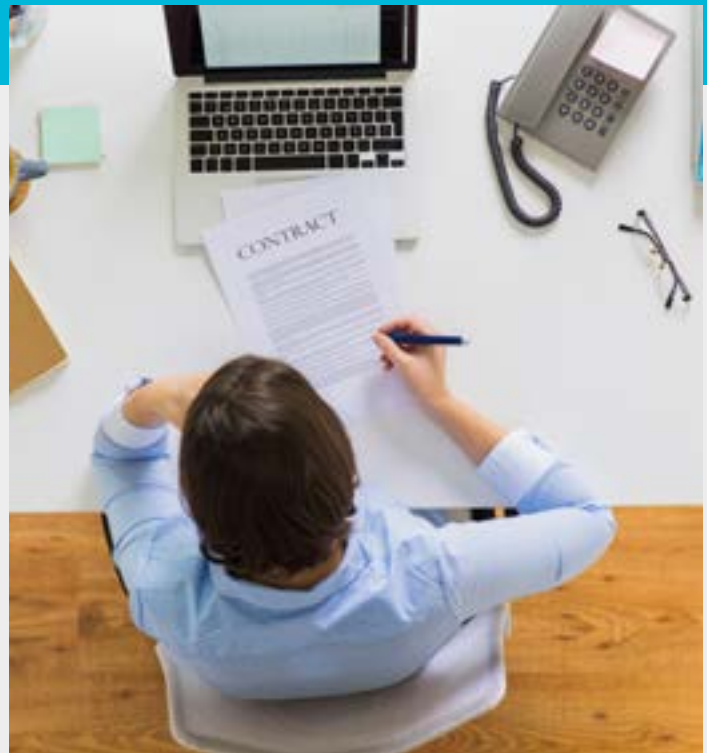

- Missing the documents
- Recurring information and manual approval efforts
- Invisible and hard to follow comments
- Taking too long time in signing the contract
- Difficulties of tracking the penalties and exceptions manually defined by the contract.
- Uncontrolled active current vendor

Contract Manager by AnyWare Apps helps you create, attach and control each process of contract management with a user-friendly & dynamic form page. Also to design a template contract is easy and quick.
