Miva Launches New Payment Integrations and Enhances Secure Credit Card Vault in 9.13 Release

New Version Helps Online Merchants Simplify PCI Compliance, Streamline Checkout and Reordering Processes

San Diego, CA – April 17, 2019 – Miva, Inc., eCommerce software and service provider for mid-size and enterprise merchants for over 21 years, today announced the version 9.13 release of its online shopping platform. This new version adds a number of new features, integrations, and performance enhancements.

Miva 9.13 adds several new key features to MivaPay, Miva's secure credit card vault. MivaPay provides secure credit card encryption and tokenization to speed up the checkout process, reduce friction, and simplify PCI compliance. With this latest release, MivaPay now supports order-level saved cards and reference transactions, enabling easy credit card reauthorization, streamlined reordering, and enterprise-level back office workflows.

"With MivaPay and these new features, Miva is enabling merchants to streamline their back office operations," says Brennan Heyde, VP of Product. "This update gives sales and customer service reps better tools to create new orders quickly and reauthorize expired authorizations without ever needing access to the customer's full card number, reducing PCI scope for the merchant," says Brennan Heyde, VP of Product.

The 9.13 release also includes the new MivaPrint Q feature, which allows users to establish unlimited print queues for printers in multiple locations and print thermal labels from any number of warehouses or printers.

Important payment updates in the 9.13 release include a brand-new integration for enhanced security and simplified PCI compliance for merchants. This latest version also introduces new Miva partner plugins for sales tax management, fraud protection, and payment processing.

"This release offers merchants increased security, convenience, and control," says Heyde. "The enhancements in 9.13 are all about enabling faster Miva stores, giving merchants the tools they need to optimize their business processes, and streamlining payment, sales tax, and fraud prevention operations."

Miva 9.13 is now available. Learn more at https://www.miva.com/whats-new-version-9-13
