FOR IMMEDIATE RELEASE

Data Ticket Achieves SOC 2 Type 2 Data Center Compliance

The full-service parking and administrative citation-processing agency was examined by Assure Professional, proving the security of its Citation Processing system.

Green Bay, Wis. (April 30, 2019) —Data Ticket, a full-service parking and administrative citation-processing agency, has successfully completed a Service Organization Controls (SOC) 2 Type 2 examination, performed by Assure Professional - a leading cybersecurity, assurance and compliance solutions provider. Data Ticket's Citation Processing system is SOC 2 Type 2 compliant, by the standards established by the American Institute of Certified Public Accountants (AICPA).

"We congratulate Data Ticket for achieving compliance, which showcases their dedication to providing the highest level of security for their clients," said Juan Vargas, Assure Professional Senior IT Security Auditor.

In pursuit of this industry-leading certification, organizations must undergo a rigorous analysis that can include the five Trust Services Principles (TSP): security, availability, processing integrity, confidentiality and privacy.

SOC 2 Type 2 compliance is determined by tests and reports conducted by an independent auditor, on the structure and operational soundness of a service organization's controls, over a period of six months to a year. The review is specific to IT and data center service providers. The audit accounts for the system of the data center, and the suitability of its design of controls, as reported by the company. The audit also includes verification of an auditor's opinion on the operating effectiveness of the controls.

Data Ticket successfully performed the SOC 2 Type 2 audit against security and availability, proving they are taking appropriate measures to assure its systems are protected against unauthorized access. The comprehensive report examines multiple controls over the security and availability of its hosting services.

"Assure Professional has provided exceptional service, and has been a great partner to our company during the process of pursuing SOC compliance," said James Jones, Data Ticket CISO.

Recognized as a leading provider for effective and efficient data processing in collection of parking and administrative citations, Data Ticket provides software and services for city, county, university and other public agencies, nationwide. Initially specializing in delinquent parking citation collections, Data Ticket has grown their solution in other areas including electronic moving violation software; permit issuance and management; and tow management.
