phoenixNAP Establishes a Network Point of Presence in Milan

phoenixNAP enhances its network connectivity with a Milan node

Phoenix, AZ, May 7: phoenixNAP®, a global IT services provider offering security-focused cloud infrastructure, dedicated servers, colocation, and specialized Infrastructure-as-a-Service (IaaS) technology solutions, today announced the establishment of a new network point of presence (PoP) in Milan, Italy. With the Milan node, phoenixNAP brings its European presence to a total of six locations, two of which are full service production nodes – Amsterdam, The Netherlands and Belgrade, Serbia.

The Milan location follows the recent addition of network nodes in Warsaw, Poland; Madrid, Spain; and Sydney, Australia. These nodes enable phoenixNAP to provide connectivity into all major European and global interconnectivity points, ensuring maximum network speeds and low latency for its customers. With data center and PoP locations in the U.S., Europe, Asia, and Australia, phoenixNAP has a robust network footprint across the globe.

> *"The launch of the Milan node is another important milestone in our European expansion," said Ian McClarty, President of phoenixNAP. "Our global network locations are strategically selected to support the location-based IT needs of our customers in Europe and those in the U.S. that would like to expand to Europe. As a major metro area and an IT hub, Milan will give a significant boost to our high-speed network."*

Providing access to all major European and global fiber routes, Milan is one of the most significant network hubs in Italy. This strategic new node is a significant extension of phoenixNAP's global data center network that now includes 14 locations across the globe. Such a geographic distribution ensures 100% uptime across locations and offers 2.35 Tbps of connectivity between data centers. Global organizations can leverage this capacity to achieve uptime, resiliency, and security for their critical workloads.

> *"Current IT needs increasingly rely on geographical distribution and we are proud to support the organizations we work with in that respect," said William Bell, Executive Vice President of Products at phoenixNAP. "The launch of the Milan node marks another step on our journey to expanding our global footprint and we will be adding further strategic locations in the following months."*

phoenixNAP is a Premier Service Provider in the VMware® Cloud Provider Program and a Platinum Veeam® Cloud & Service Provider partner. phoenixNAP is also a PCI DSS Validated Service Provider and its flagship facility is SOC Type 1 and SOC Type 2 audited.

About phoenixNAP

phoenixNAP® is a global IT services provider with a focus on cybersecurity and compliance-readiness, whose progressive Infrastructure-as-a-Service solutions are delivered from strategic edge locations worldwide. Its cloud, dedicated servers, hardware leasing, and colocation options are built to meet always evolving IT businesses requirements. Providing comprehensive disaster recovery solutions, DDoS-protected global network, hybrid IT deployments with software and hardware-based security, phoenixNAP fully supports its clients' business continuity planning.
