

## **Globanet Announces Compatibility with New Relativity Short Message Format for Relativity Trace**

**The data source capture provider is now able to offer the short message format for customers using Relativity Trace on RelativityOne**

**London, May 20, 2019** -- Globanet today expanded its partnership with proactive compliance monitoring application Relativity Trace by announcing its compatibility with the new Relativity Short Message data format now available in Relativity's cloud-based RelativityOne platform.

As the impact of regulatory failings increase year over year globally, the ability for organizations to detect and act on suspicious activity including insider trading, collusion, bribery, and other high-risk activity, is becoming increasingly important. To detect this activity, it is critical that compliance teams can alert on and review employee communications in real-time.

Trace's integration with Globanet enables automatic ingestion of data from over 60+ sources including major financial chat platforms like Bloomberg, Reuters, and Symphony, enterprise chat systems like Skype and Slack, and file sharing and collaboration applications like OneDrive, Box, and Microsoft SharePoint, directly into their compliance workflows.

With Globanet's short message data integration into Trace, the data can now be displayed much in the same way it is in the native application: seeing emojis, images, reactions, comments, likes, and more, that provide critical context for understanding communications in the digital world. The first of Globanet's connectors that can export to the Relativity Short Message data format is Bloomberg, with additional sources like Slack coming soon.

"The industry has been asking for a mechanism that allows for simple, efficient and effective review of all the different data types in which Merge1 can capture," said Ramin Yazdi, CTO of Globanet. "With the new Relativity Short Message Format technology, we have been working on with Relativity, this is now possible. Not only can email be searched in its native format, now the growing list of over 60+ sources and channels such as Slack, Bloomberg, Symphony and others that Globanet Merge1 captures can also be reviewed in a format that is simple and easy to review while organizations achieve compliance."

"Offering users a robust review experience is vital to ensuring that compliance teams are able to stay ahead of the bad actors within their business," said Jordan Domash, General Manager of Relativity Trace. "We're excited to expand our partnership with Globanet to offer this new Relativity Short Message Format so that compliance teams can better manage risk in their organizations."

Members of the Globanet and Relativity Trace teams will be presenting their new compatibility at [Relativity Fest London](#), EMEA's largest legal technology conference, taking place on May 21<sup>st</sup> at 133 Houndsditch.
