WinCan Releases Poster for PACP Construction Feature & Miscellaneous Codes

New resource is final addition to three-part pipeline observation code poster series.

Pittsburgh, PA—July 10, 2019—WinCan sewer assessment and asset management software has released the third and final piece of its PACP Poster Series: Construction Features & Miscellaneous Codes. This free tool provides an illustrated reference guide to help system operators, inspection professionals and engineers improve accuracy and efficiency in documentation and assessment.

The poster details construction features frequently found during the pipeline inspection process, as well as miscellaneous codes often forgotten, to ensure compliance from operators in the field and engineers and superintendents in the office.

“Consistency in both the sewer inspection and documentation processes is essential to the assessment and management of sewer systems,” says Mike Russin, Business Manager for WinCan in the Americas. “We understand it can be difficult to keep track of them all, so we are thrilled to provide another free resource guide to aid in the inspection process with our PACP Poster Series.”

The poster is publicly available, free of cost, and can be requested at <http://inbound.wincan.com/en-us/construction-features-code-poster>.

About WinCan

WinCan was the original pipe inspection and asset management software when it entered the market 25 years ago. Today, it's the most trusted pipeline software brand worldwide, thanks to continuous innovation and exceptional support. WinCan transforms raw inspection data into the intelligence municipalities and contractors need to make critical maintenance decisions. The software's measurement tools help to quantify defects, and sophisticated search capabilities filter observations by any combination of criteria. Its report generator automatically summarizes inspection findings using a standard or user-defined template. Native support for GIS mapping, side-scanning and 3D are among WinCan's most innovative features.

In the Americas, WinCan is uniquely positioned to deliver support, training, customization and integration with all common municipal databases and mapping software programs. WinCan works directly with end users, and also with inspection equipment manufacturers, helping them deliver integrated hardware/software solutions that allow their customers to document, analyze and report pipeline condition.
