UPGRADE WITH
DISCUS 10

DISCUS 10 improves the user's experience and provides exciting changes that outshine the previous releases.

DISCUS Desktop can now automatically balloon engineering drawings in PDF or TIFF format. With auto ballooning, DISCUS takes another productivity leap forward, enabling users to balloon specific page areas or the entire page with just a few mouse clicks.

If you need to balloon PDF or TIFF drawings for:

- First Article Inspection Reporting (AS9102)
- In-process Inspection Planning
- Setup Verification Sheets
- Operation Work Instructions

DISCUS Software is proud to announce their latest software update, DISCUS 10. This release offers a refreshing and updated look and feel that is both modern and concise. DISCUS 10 has improved the ease of use and focuses on not only the requests of our customers but a greater industry need for a more intuitive and responsive software experience.

DISCUS 10 is the result of feedback from our more than 1,500 customers. We strive to enhance the DISCUS experience across all DISCUS Desktop modules including OCR, Results, CMM, Planner, and 3D.

Try our extended 30 day evaluation where you can use your own input files (models, drawings and specifications) while testing out DISCUS!

Be sure to attend our DISCUS training sessions to see these new features!

"The DISCUS team knows exactly what we want in inspection software and they once again delivered. DISCUS 10 not only has a sharp and modern new look, but has some great new features."
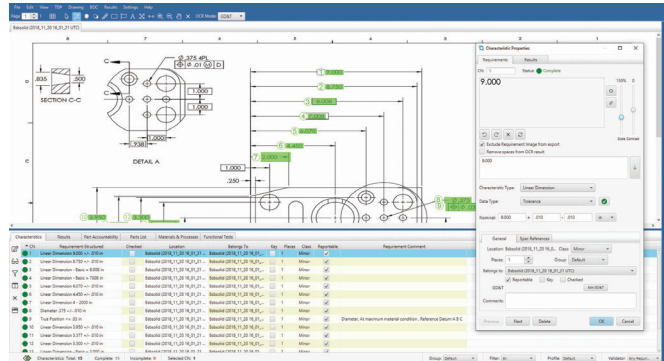

- Michael Parsley, Precision Systems Manufacturing

DISCUS 10 IMPROVEMENTS INCLUDE:

MODERN SOFTWARE INTERFACE – DISCUS 10 has a visually appealing and functional accessibility that retains the smart and intuitive functionality. Learning DISCUS 10 will take a few minutes, at most.

ALL SETTINGS IN ONE PLACE — Users can now adjust all the settings in one place. Change balloon shape and size, click to adjust tolerances and OCR settings by accessing the inclusive Settings options.

DOCKABLE BILL OF CHARACTERISTICS – When working with the characteristics, users can now undock the list of requirements for a double screen experience. Maximizing your control and visibility to the characteristics on one screen and viewing the ballooned print on another provides users a modern approach to creating, modifying, and reviewing the data.

CONSOLIDATED ICONS – DISCUS 10 has reduced the number of functional icons, such as one leader line for all items: Balloons, Sub balloons, Flag Notes, and Mark up Text. DISCUS 10 is not only visually appealing but easier to use!

OCR SETTINGS IN TOOL BAR – Change the OCR settings quickly in a single click and view your current setting right on the tool bar. There is no need to drill-down to find the OCR settings—now it's immediate and visible.

NEW ICONS – Dropping balloons, adding sub balloons, auto ballooning, and zooming plus more, have a precise cursor that allows user greater precision in applying actions on the drawing.

ASSIGN SPECS VIA NOTES FOR STREAMLINED ENTRY BOX – When you assign specs from the notes, you can copy & paste the spec name immediately without clicking an additional tab. That information is immediately available.

ASSIGN MULTIPLE FILTERS – Now you can assign more than one filter configuration in DISCUS 10. For example, assign a filter for key and diameters and you can see both the key characteristics and all diameters. The entire Filter function has been improved with time-saving features.

MOVE BALLOONS AT ANY TIME – If you need to move a balloon, you can do so at any time without using the selection tool.
